SUSPENSE SUSPENSE SUSPENSE

Are You In Suspense?

Are you wondering what happened to your order or payment, even after a fortnight? But did you mention your name and address clearly while sending payment, and what the payment was for?

We get several payments every month without adequate instructions or even identity of the person sending the payment. As a result we are unable to take appropriate action on these, till we get a complaint - if at all.

At EFY, we want you to be our satisfied customer. So please do let us know in case your payment or instructions are not even acknowledged within a fortnight. We are not that lazy!

tumbling out, and they reveal that the Indian Space Research Organisation (ISRO) had kept the Moon orbiter's problems tightly under wraps.

Contrary to the space agency's explanation that Chandrayaan's orbit around the Moon had been raised from 100 km to 200 km in May this year for a better view of the Moon's surface, it is now known that this was because of a miscalculation of the Moon's temperature that had led to faulty thermal protection. It transpires that heating problems on the craft had begun as early as Nov. 25, 2008, forcing ISRO to deactivate some of the payloads—there were eleven in all.

India to undertake Mars mission between 2013 and 2015

India's first unmanned lunar mission, Chandrayaan-1, may have been abandoned after the country's national space agency lost radio contact with the spacecraft. But Indian astronauts are now gearing up for bigger challenges with the Indian Space Research Organisation (ISRO) announcing plans to launch its first mission to Mars sometime between 2013 and 2015.

The space agency has begun preparations for sending a spacecraft to Mars to explore the red planet in quest of its space ambitions. Instead of the polar satellite launch vehicle used in the lunar mission, the geosynchronous satellite launch vehicle would be used for the Mars project and placing the spacecraft in its orbit. ISRO may even use nuclear power to propel the craft towards Mars. It is also making efforts to bring down the cost of the Mars mission, as was done with the Chandrayaan-1 mission, which cost less than \$100 million.

Mumbai goes hi-tech to trace traffic offenders

The traffic police department in Mumbai has gone hi-tech with the

launch of a Rs 520-million Area Traffic Control (ATC) project to assist in monitoring security and law-and-order situations. As part of the project, 99 CCTV cameras (to be expanded to include about 5000 CCTVs) have been installed across the city, which will be monitored on a huge 2.1x4.3m² video screen at the traffic police headquarter in Worli. Cops can tilt cameras, freeze frames and zoom in on trouble spots. They will also be in touch with their colleagues at these junctions.

A counter terrorism move, the project was earlier approved by a group of ministers considering the importance CCTV footages played in the investigations to the 26/11 Mumbai attacks.

India's first HD mobile video-conferencing solution

Actis Technologies has launched what it claims to be India's first-ever high-definition mobile video-conferencing solution. Businesses and institutions can invest in one system for multiple rooms as the system can be moved from one room to another on castors without disassembly.

The MVU series video-conferencing trolley offers high-definition (1080p at 30-frames per-second) viewing experience and includes an integrated display (single or dual monitors), camera, codec, mike and speakers. It is preconfigured to make video-conferencing calls within minutes (through ISDN and IP support) and offers ideal screen height that enables good eye-contact between the participants. A remote-driven interface makes its operation intuitive.

While the Actis MVU Series allows integration with any existing or old video-conferencing solution, it functions well with as little as 128kbps up to 6Mbps bandwidth speeds, ensuring cost-effectiveness in operation and real-time PC content sharing.
