

Design & Simulation Bonanza for Engineers

In this month's CD you will find certain major PCB designing tools. Besides, you will also find a file-sharing and file-transfer software under the utilities section.

What's EFY CD all about?

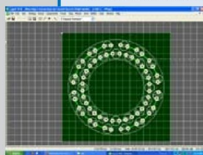

Welcome friends! Wondering what goodies we have on the EFY CD? Allow us to reveal all! There are three to four different categories of software that we feature every month, most important of which is the 'Design and Simulation' category, which comprises various electronics software, datasheets, e-books, circuit ideas and EFY software.

The CD also contains three other sections: Resources, Fun and Utility. 'Resources' contains essential software like Acrobat Reader, Enzip and a few others, which form the basic requirements of any PC.

The 'Fun' segment includes computer games, whereas in 'Utilities' you will find multi-media and IDE software, Internet applications, etc.

Layo1 PCB (Design and Simulation, 2.9MB)

Layo1 PCB is a product of Baas Electronics. It is a professional PCB designing tool that helps you do your work easily and efficiently. The latest version of the software is 10.26 that was released on July 13, 2009. This software supports a maximum PCB design size of 2000 mm x 2000 mm. It allows unlimited number of vectors per PCB design,

has internal resolution of 0.1 micron, and provides documentation layer for silkscreen, soldering mask, soldering paste, assembly, etc. You can undo and redo design up to five times. You also have online DRC and can create unlimited number of templates for personal settings with online help. It also provides automatic and adjustable number of spare files on separate drive or computer. For more information visit <http://www.layo1.com/layo1pcb/uk/index.html>

DipTrace (Design and Simulation, 36.2MB)

DipTrace is a product of Novaram. The latest version of the software—v2.05b—was released on September 9, 2009. It is a PCB designing software that contains a PCB layout with auto-router and auto-placer. It also provides an external auto-router support. It has a powerful automatic router, superior to many routers included in other PCB layout packages.

DipTrace comes with a schematic capture, component and pattern editors that allow you to design your own component libraries.

The software also provides smart manual routing tools that allows you to finalise the design and get the results you want at the blink of an eye. It also allows you to exchange schematics, layouts and libraries with other EDA tools and CAD packages. The output formats are dxf, gerber drill and G-code. The standard contains more than 70,000 components. For more information visit <http://www.diptrace.com/>

Easy-PC

(Design and Simulation, 279MB)

Easy-PC is an integrated circuit and PCB designer by Numberone Systems. Its latest version is v13—a new version of Easy-PC comes out every July with about 30-50 new features.

Some of the key layout features of this software are integrated component auto-place, choice of optional integrated auto-routers, easy-router or pro-router, split and partial power planes, 3D visualisation of board, automatic track smoothing mode, back annotate name changes to schematic and automatic component rename. It supports SMT, PTH, mixed technology and components on both sides of board, unlimited layers and user-defined layer types, net and via optimiser, online and batch design rule checking, ODB++ manufacturing output and dimensioning. For more information visit http://www.numberone.com/easy_pc_v13.asp
