

Surveillance on mobile enabled by Omnisurv solution from Sparsh

INVEST IN YOUR OWN SECURITY

Assess the sources of threat before you select a security system for your home. A totally integrated system is recommended. But, if your budget doesn't allow, you can start with the basic and gradually upgrade

■ **UMA BANSAL**

Electronic security for homes is fast catching up in India. With either the elderly or kids alone at home while you are away at work, it is essential for you to have a proper surveillance system in place at home.

A variety of security systems are available right from simple intrusion de-

tector panels to intelligent remote monitoring systems. These include intruder alarm systems, auto dialers, doorphones, electronic locks, remote panic alarms and video surveillance systems.

Security systems can also be integrated with home automation features. Various residential builders are already offering home automation and security together as an add-on feature for their clients.

If you are planning to install, you can choose between wired and wireless security systems. Both types can be further divided into user-friendly and high-end programmable systems.

Here's the way to go for an ideal security system for your home.

Cost

Don't forget this is an investment for your own security. The cost of the
