## Dell failed to manage e-waste, says Greenpeace

According to Greenpeace, global computer hardware brand Dell has failed to manage its e-waste in India. Greenpeace points out that while Indian companies are serious in handling e-waste and have been taking steps towards greening their business operations and products, international companies like Dell have been practising double standards and taking Indians for a ride.

Dell has received penalty points for the second consecutive time in the latest Greenpeace ranking guide for green electronics, along with Hewlett Packard (HP) and Lenovo—for backtracking on its commitment to phase out PVC and BFR from its production processes by the year-end. Nokia remains on top, followed by Samsung and Sony Ericsson, for taking steps to make its manufacturing process green.

## LG's green initiative in India

LG Electronics will develop a clean development mechanism (CDM) business in India to get carbon credits. This decision has been taken as an initiative to reduce global greenhouse gas emissions cost-effectively.

The Kyoto Protocol states that under the CDM if an industrialised nation participates in a project to reduce greenhouse gas emissions in a developing nation, that nation will be entitled for getting carbon credits from the United Nations.

LG's eco-strategy team, in cooperation with LG Electronics India, will develop the CDM business after doing research work in India to find out ways of doing it.

## Schneider to set up online energy university

Schneider Electric will establish an online educational university to impart the fundamentals needed to implement energy-efficient solutions for various applications. The courses will be designed to help anyone who is involved in decision-making, management, planning, design or construction works that are impacted by energy in
