

Induction Lamps and Solidstate Refrigeration

I want to thank T.A. Babu for his article 'Electroless Induction Lamps Last Longer' and Dr S.S. Verma for 'Solid State Refrigeration with No Compressors' published in the July issue. These are the latest topics, so thanks to EFY too.

Electromagnetic Interference

I am keen on understanding electromagnetic interference (EMI) generated from electronic systems. Kindly publish an article on EMI, its generation, suppression and regulation.

U. Sree Hari
Hyderabad

EFY: You may refer to the article 'Some EMI/EMC Aspects We Should Know' by Manjula Bhati, published in EFY's April 2007 issue. To purchase this issue using credit card, visit www.efy-magonline.com.

Memory Testers for PCs

Please let me know if you have RAM testers to check SDRAMs and DDR memories. I've heard that Taiwan-based company Optimum Care International offers very good testers but unfortunately, these are costly. We are trying to get RAM testers from India but in vain. Please help.

Solenoid Valve Suppliers

I want to assemble the 'Automatic Tap Controller' circuit for which I need a solenoid valve. Can you provide me the addresses of solenoid valve suppliers in Mumbai?

Sangramsing Patil
Through e-mail

EFY: You may visit Website 'www.elebb2b.com' and search for any product and vendor.

Electronic Components

I want to know the details of each and every electronic component used in the circuits (like resistors, capacitors

and inductors).

S. Ashish Kumar Singh
Hyderabad

EFY: You may visit the following link and search the topic by entering 'components' in the search box followed by clicking 'Go' button to find the relevant details: <http://www.electronicsforu.com/electronicsforu/articles/moretechnicalarticles.asp?words=components&fields=>

Buying Circuits

I want to purchase the circuits from your portal. Please tell me the difference between 'Circuit Ideas' and 'Construction' projects. I want to buy the 'Automatic Emergency Tubelight Circuit', published under 'Circuits on Sale' section on your website. Will you send the circuits along with tubelight and battery or should I purchase them separately? Is this circuit the same as 'Fully Automatic Emergency Light' published in the 'Top 10 Circuits' column of the January issue?

Dheeraj
Through e-mail

EFY: 'Circuit Ideas' are smaller projects with fewer details, whereas 'Constructions' are larger projects with more detailed descriptions along with illustrations, screenshots, flow-charts and relevant source codes and PCB layouts of the projects.

In 'Circuits on Sale' section, we have clearly mentioned that the circuits are in PDF file formats. So you will not get tubelight and battery. To purchase the project kit (components, PCB, etc), visit 'www.kitsnspares.com'

Please note that 'Automatic Emergency Tubelight' and 'Fully Automatic Emergency Light' are two different projects and each of these is out of stock.

☐ I am working on the embedded platform and want to assemble some projects of my own. I don't know how to purchase these projects directly from you. Please tell me a way to get the entire list and details about purchase of these projects.

Kiran Kumar C.N.
Bengaluru

EFY: The complete list of the projects and purchasing details can be found

from the website of EFY associates Kits'n'Spares at 'www.kitsnspares.com'

PC-based Wireless Appliance Control

I am constructing the RF remote control for 'PC-based Wireless Appliance Control' published in July issue. I want to know:

1. Where to connect the push-to-on switches? I'm not using the PC's parallel port on the transmitter side.
2. On the receiver side, I am using L293D motor driver to control the motors. If I connect data input D1 to pin 13, D2 to pin 12, D3 to pin 11 and D4 to pin 10 of HT12E, what output will I get at pins 13 down through 10 of HT12D? Will I get complements of D1 through D4?
3. Why are you using DIP switches?
4. Where can I get RF modules?

Veerendra
Through e-mail

The author Anshuman Bezborah replies:

1. Connect the switches between data pins and ground so that when you press them, the respective data pin goes low.

2. You will not get the complement of the input data. The output data pins of HT12D are normally high and these become low when the corresponding data pins of HT12E are made low. Connect pins 2, 7, 10, 15 of L293D directly to the data pins of HT12D.

3. DIP switches are used to change the address. If not required, ground all the pins of both HT12D and HT12E through the DIP switches SW1 and SW2, respectively. The objective is that the bit pattern of A0 to A7 should be the same in both HT12D and HT12E.

4. For RF modules, please contact Gala Electronics, Mumbai. You can purchase these from Delhi also.

ERRATA

Readers may please note that the price of FUJIFILM F200EXR camera is Rs 18,999 and not Rs 8999 as printed under 'First Look' section of EFY July issue. We regret the inconvenience caused.
