

entist at NIST, said the team covered a surface with a non-stick material before condensing gold on top of it, allowing the metal to cool to an ultra-smooth surface. It then laminated the gold surface with the plastic used in overhead transparencies. The non-stick layer allowed them to remove the laminated gold from the surface as easily as peeling off the plastic wrap. Adding the organic molecules then was comparatively simple: they attached the molecules to gold and then flipped the whole assembly onto a silicon base, with the organic molecules sandwiched neatly inside.

Eco-friendly phone

Samsung claims its Reclaim to be the first cellphone in the US that is constructed from eco-friendly bioplastic materials. With a hardware casing made from corn-derived bioplastics, a charger that consumes twelve times less power than conventional phones and a packing that is 70 per cent recyclable, Reclaim has many elements that make it sustainable. It has a slide-out, full QWERTY key-

Samsung Reclaim mobile phone

board and operates on 3G network.

The phone is claimed to be free of polyvinyl chloride, phthalates and brominated flame retardants—three materials commonly shunned by green electronics guidelines. The outer

packaging and the phone tray inside the box are made from 70 per cent recycled materials. The images and text on the box as well as the phone's warranty information are printed with soy-based ink.

Green latex printing technology

Hewlett-Packard has developed a latex printing technology with the environment in mind. This technology reduces the total environmental impact of printing and helps corporates reach new levels of productivity.

The ink life of latex prints is up to three years unlaminated and five years laminated on a range of media outdoors, and up to five years unlaminated and up to ten years laminated on a range of media indoors.

As latex inks are stretchable, these are best suited for vehicle wrap graphics. Other application areas include point-of-purchase displays, transit signage, wall murals, exhibition graphics and billboards.

LEAD-FREE EMS AVAILABLE

Lohia Group, a world class machinery maker based in Kanpur offers EMS at their state-of-the-art SMT based manufacturing.

- State-of-the-Art Automatic SMT Line
- Lead Free Soldering
- ISO 9001/2000 Standards

enquiries welcome at:
Lohia Starlinger Limited, 218, Ansal Chambers II,
New Delhi - 110 066, T: +91 11 30641770,

New Revolution in Lighting... LED LIGHTING

3 mm/5 mm R/ G/ Y/ B Diff / Trans LED, Straw Hat / Helmet shape LED, IR LED, Super Flux LED

MCPCB in different shapes

Power LED, emitter and star type 0.5W - 30W

Constant Current LED Driver 1W, 3W, 5W, 7W, 10W, 20W, 30W

Lense for MR-16 LED Lamps, Street Light and other LED Lights

Lithium Battery, Ni-CD/Ni-MH Battery, Coin Cell

LED Street Lights, T-5 LED Lamp, 2.5W Panel, Round Lamp

Night Lamps, Pooja Lamps, Decoration Lights

Aluminium and Plastic Housing and Assembly for LED Lights

MR-16 Lamps, PAR-38 Lamps in 12VDC/230VAC, 1W, 3W, 5W, 7W, 10W, 21W
