stumbling blocks as it tries to innovate and manufacture smarter vigilant solutions. Cutting manufacturing costs is also a challenge. Manufacturing involves sourcing components, fabrication of PCBs and assemble. While assembling can be done in India, sourcing components and finding good fabrication units are a problem.

"Components aren't made in India as the foundries needed for it are located in Southeast Asia. We pay high import duty to source these components. Taiwan and Chinese manufacturers get them 20 per cent cheaper. Further, very few fabrication set-ups in India can design PCBs that have a fine pitch in the chips," says Saharan. As a result, VVDN solutions are higher priced at Rs 100,000 for a four-IP-camera

system and Rs 180,000 for an eight-IP-camera system.

Low volumes add to the costs while manufacturing products. "If we manufacture large volumes, we save 40 per cent," says Saharan. Further, the corruption in the government tender process hampers local players. "The government compromises on quality and doesn't give preference to local players while making purchases," says Saharan.

Realising that there are many hurdles ahead, VVDN Technologies focuses on partners and supplementary services to stay competent. A strong ecosystem has helped it spread its wings. "Our partners like Shyam Telecom have helped us grow," says Saharan. Further, the income generated from services from software development lifecycle, wireless, networking and telecom is used for supporting R&D.

VVDN Technologies is now working on high-definition cameras and a digital video recorder (DVR). "The DVR solution will be priced at Rs 40,000 for a four-camera solution, which should be production ready by October 2009. We are also working on cheap solutions for the home segment," says Saharan. ●
