

Design & Simulation Bonanza for Engineers

This month our CD theme is 'Design and Simulation'. Also, we have some multimedia applications and games for you!

What's EFY CD all about?

Welcome friends. Wondering what goodies we have on the EFY CD? Allow us to reveal all! There are three to four different categories of software that we feature every month, most important of which is the 'Design and Simulation' category, which comprises various electronics software, datasheets, e-books, circuit ideas and EFY software.

The CD also contains three other sections: Resources, Fun and Utility. 'Resources' contains essential software like Acrobat Reader, Enzip and a few others, which form the basic requirements of any PC.

The 'Fun' segment includes computer games, whereas in 'Utilities' you will find multimedia and IDE software, Internet applications, etc.

TINA (Design and Simulation, 52.5 MB)

TINA is a PCB designing tool that helps you develop single- and double-sided or multilayer PCBs for your circuits with a single click of the mouse, using automatically placed and routed components. All the components in TINA have associated footprints. The software helps you review and edit a component's footprint, using the components' spreadsheet. It provides 3D features, which enable you to see the end product in three dimensions. The fully-integrated layout module of TINA has all the features required for advanced PCB design, including powerful auto-placement, auto-routing, flexible PCBs, manual and 'follow-me' trace placement, DRC, forward/back annotation, pin/gate swapping, keep-in-out areas, thermal relief, fanout, plane layers,

Gerber file output and much more.

Another interesting feature that TINA has is Flex PCBs. These are PCBs where electronic devices are mounted on flexible plastic substrates. They are used in cameras, mobile phones, etc. For more information, visit <http://www.tina.com/English/tina/>.

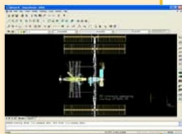

CADopia (Design and Simulation, 47.2 MB)

CADopia has a full-featured 2D and 3D CAD program based on the IntelliCAD technology. If you are an architect, engineer, interior designer, student or educator, you will find the CADopia software extremely useful for creating, editing and viewing professional drawings.

The standard edition of this software is sufficient if your needs are limited to basic drafting, dimensioning and annotation. This software has a useful file format (DWG) as it allows you to open and save files created in other software, avoiding software loss.

CADopia also has a file converter, making it possible for you to convert files received from clients into desired formats. With this software, you can open multiple files simultaneously. Furthermore, it has a comprehensive suite of drafting features, including boundary hatch, dimensioning, fly over snapping, complex linetype support, polyline and spline creation, 3D view creation and printing and plotting support. It also supports AutoLisp for customisation of the product. The downloadable version of the CADopia can be found at <http://cadopia.com>.

Profilab-Expert

(Design and Simulation, 6.4 MB)

Profilab-Expert is a combination of DMM-Profilab and Digital-Profilab. It is a digital and analogue-measuring software, using which you can realise any digital or analogue-measuring technology project without writing programs. With this software, you can create projects merely with the help of wiring diagrams. Moreover, it is compatible with the older version, so you can edit your old projects as well.

The Profilab-Expert comes with an extensive library of logic components, such as gates, pulse generators, flip-flops, counters, registers, RAMs, and ROMs. Its library also contains arithmetic components like trigger, sample and hold, formulae, alarm clocks, etc. For more information, visit <http://www.abacom-online.de/uk/html/produkte.html>.
