

Are You In Suspense?

Are you wondering what happened to your order or payment, even after a fortnight? But did you mention your name and address clearly while sending payment, and what the payment was for?

We get several payments every month without adequate instructions or even identity of the person sending the payment. As a result we are unable to take appropriate action on these, till we get a complaint - if at all.

At EFY, we want you to be our satisfied customer. So please do let us know in case your payment or instructions are not even acknowledged within a fortnight. We are not that lazy!

The program here is basically for calculating the resistors' values as per colour input received from the user. The resistor_code.m code is the main and executable code of this project. Other supporting files include colour image files which should be in the same folder where .m file is kept.

Testing procedure

To test this program, follow the below-mentioned steps:

1. Install MATLAB 7.10 or higher version in your system. You will see

MATLAB icon on the desktop. Just click it and you will see a blank Command Window.

2. Download the source code folder from this month's EFY DVD or from source.efymag.com

3. Run the resistor_code.m program from the folder. A GUI will appear as shown in Fig. 2.

4. Now choose the colour as per your desired resistor colour band, say 10-kilo-ohm, and you will get the result as shown in Fig. 3.

Thus you can find the values of
