DeitY constitutes council to enforce local sourcing

With the recent news of falling domestic manufacture of electronic products, India is making proactive efforts to counter the slip. To encourage local manufacturing in India, the Department of IT and Electronics (DeitY) has formulated the National Planning and Monitoring Council (NEPM). It is expected to implement some domestic electronics sourcing rules for the government contracts. According to a newspaper report, the decision has surfaced after many local electronics, hardware and telecom product suppliers complained that they were unable to participate in some telecom projects.

Tamil Nadu state departments to switch over to open source software

The Tamil Nadu government has insisted in its advisory that all departments should switch over to free open source software BOSS Linux in the days to come, when Microsoft stops providing technical assistance for Windows XP.

report estimates that the medical electronics market in India will grow to \$11.7 billion in 2017, from \$6.5 billion in 2013.

The report compounds an annual growth rate of 16 per cent. The Indian medical electronics market is anticipated to grow at this rapid pace due to growing middle-class income and increasing number of lifestyle diseases such as obesity and diabetes.

India cuts renewable funds halting solar growth

India has reportedly cut the annual budget of the Ministry of New and Renewable Energy (MNRE) by nearly

₹ 11 billion. The budget cut will impact the solar industry by huge margins, as many firms have already started to interpret the results.

MNRE is granted a total budget of ₹ 4.41 billion, that is, \$ 72 million for the 2014-15 financial year. The budget is a massive cut down from ₹ 15 billion for the previous fiscal year.

Panasonic will make India a regional hub by 2015

Electronics maker Panasonic Corporation has confirmed that the company will make India its regional hub

by 2015. This move counter targets the direct dominance of South Korean empires of LG and Samsung that prevail in the Indian market. Since India is still a developing market, Panasonic aims to create a fresh variety of products that suit the local industry, and further double its revenues to \$3.6 billion.

As a regional hub, India will not only export products to neighbouring countries but also help in developing them as per the needs of these markets.

India-US begin second round of talks on solar trade dispute

India's Jawaharlal Nehru National Solar Mission (JNNSM) has been much in debate as the US had recently filed a complaint at the World Trade Organisation (WTO) against it. The second phase of mission has come under the scanner as India and US will start consultations on mandatory local-buying requirements for certain parts that are used in solar equipment.

The consultations were aimed at resolving the WTO complaint and have given India a chance to justify its motive. If the US is not content with the consultations, the country can ask the WTO to set up a dispute settlement panel for it to fight the case.

C-DAC Mohali designed digital stethoscope to reduce price significantly

In a small but important step in developing electronic devices for domestic needs, C-DAC Mohali has developed a wireless digital stethoscope. The device works with a wired headset as well as with a Bluetooth. The heartbeat analysed through the device can be displayed on a mobile handset and the data can be stored on a laptop.

Compared to a commercially available digital stethoscope, that costs about ₹ 60,000, the digital stethoscope developed by C-DAC will cost around ₹ 6000 (prototype) plus ₹ 2000 for the Bluetooth headset. The trials of the device are presently underway. Technology transfer process is also likely to start shortly.
