

# NEW PRODUCTS

RECENTLY INTRODUCED IN INDIA, FROM NEAR AND FAR

## TEST & MEASUREMENT

### Earth ground testers

Fluke Corp. has introduced the latest range of new earth testers 1623-2 and 1625-2 with advanced features and accessories that speed up verification of a reliable connection to earth for grounded electrical systems. They help solve power quality problems and lower the risk of shock to the users.

Features include on-board memory and data storage up to 1500 measurements with time stamps, USB port for fast and easy download of results and colour-coded wire sets to reduce error and save time during setup.

### Waveform generators

Agilent Technologies has launched the 33600A series of waveform generators with exclusive Trueform signal-generation technology.

It comprises four different one- and two-channel models, which can generate waveforms up to 120MHz at 1GSa/s sampling rate. The waveform generators provide the lowest jitter (less than 1ps jitter, or 200x better than previous-generation direct digital synthesis generators) and the lowest

total harmonic distortion in their class, giving engineers the ability to generate the exact signals they need.

### Mixed domain oscilloscopes

Tektronix, Inc. has announced the MDO3000 series of mixed domain oscilloscopes. The ultimate integrated oscilloscope includes a spectrum analyser, logic analyser, protocol analyser, arbitrary function generator and digital voltmeter. The MDO3000 clears the design bench of costly, specialised equipment and provides the tools needed to test and debug virtually any embedded

design. The MDO3000 series oscilloscopes feature two or four analogue input channels with bandwidth ranging from 100MHz to 1GHz, 16 digital channels (optional) and one RF input channel matching the bandwidth of the oscilloscope (9kHz up to analogue bandwidth). The RF input frequency on any model can be extended to 3GHz.

### GPRS-based meter and logger

Embuilt Technologies has launched a GPRS-based class 0.2 meter and logger for three-phase electricity. While traditional energy management systems require an upfront investment of millions of rupees and a computer running for 24 hours, GML-3 acts as both a meter and a mobile with GPRS con-

nectivity to the cloud server based in India. It offers temperature/humidity/4-20mA channels as optional features for cold storage chains and environmental monitoring.

## LEDs & LED LIGHTING

### Solar LED street lights

Systellar Innovations has launched its range of solar LED street lights (10W-40W) with in-built microprocessor-controlled LED driver and PWM charge controller. It features a separate red-coloured LED to indicate dirty PV panel warning to let users know when to clean the solar panels. Other features include LED dimming/switch-off option four or six hours after sunset, LED

driver efficiency of greater than 90 per cent, battery charger efficiency of more than 96 per cent, battery temperature compensated 3-stage charging and system fault indication LED.
