

Thanks!

The article 'Managed Leased Line Network' by Dr Rajiv Kumar Singh in March issue is really interesting to read, and I like reading such articles related to telecom. My sincere thanks to the author and EFY team for bringing up such topics for the readers. These will definitely help entrepreneurs/industries/businessmen/educational institutions in connecting their offices. Students will also get new topics for their seminars and projects.

□ The article 'Fourth Generation Free Space Optics' written by Dr Rajiv Kumar Singh published in February issue has attracted me very much. This article covers almost all the facets of FSO. So, I deeply appreciate the efforts of the author and EFY in publishing such articles. I also request the editor to convey my sincere thanks to the author.

EFY: It is great to hear that you liked Dr Singh's articles. We will definitely convey your words to him and looking forward to hear from you in the future as well.

Good Articles

Articles such as 'The Bionic Body' under Healthcare and 'Radiation—A Concern, iDose'—The Solution' under Innovation in January issue are good ones. The 'Tremendous Opportunities in Mechatronics' under Career in the same issue makes a good introduction to the subject. The theme of the 'Indian Science Congress' held at Jammu University recently was 'Innovation in Science and Technology Aimed at Inclusive Growth.' Can EFY give us something like that in electronics?

Syed Anwar Owais
Electronics Engineer, Department
of Tourism, J&K Government,
TRC—Srinagar

EFY: Thanks for the feedback and appreciation! EFY is constantly striving to publish the most updated content on latest technologies. We are trying to

cover new innovations in electronics industry under the Innovation section every month.

Home Automation Through Bluetooth

The 'Home Automation Through Bluetooth' construction project published in November 2013 issue is very interesting. Please tell me a suitable programmer for P89V51RD2 microcontroller and from where I can buy it?

Mriganka Chatterjee
Through e-mail

The author Dr Mahesh N. Jivani replies:
There are so many vendors offering P89V51RD2 microcontroller. Even there are many DIY circuits available for programming P89V51RD2 chip. I am using NSK Flasher board (http://www.nsk-electronics.com/89v51rd2_flasher_-_usb.html) for programming P89V51RD2 controller with the help of Flash Magic tool. Flash Magic is a PC tool for programming Flash-based microcontrollers from NXP using a serial protocol. For more details and to download the software you may visit <http://www.flashmagictool.com> website.

Wi-Fi Embedded Webcam

Can you please tell me which kit should I use to program PIC18 using MPLAB IDE? I am using Provotek PIC Pro Board, but it is not available in the programmer list of MPLAB IDE software. Kindly suggest.

Harsh Gupta
Through e-mail

The author M. Kathiresan replies:
Any serial JDM programmer will do the job. The hardware and software of this programmer can be found from the links: <http://www.instructables.com/id/Simple-JDM-PIC-Programmer/> and <http://picpgm.picprojects.net/software.html>, respectively.

Android Phone-Controlled Robot

I read 'Android Phone-Controlled Robot' construction project published in December 2013 issue. Can you please send me the code (hex) for burning

'Spot An Error' Award Winners

□ In the article 'The Concept of Plasma Antenna,' published in the February 2014 issue, in Fig. 1, it is mistakenly mentioned that electrons are divided into ions and electrons. It should be atoms are divided into ions and electrons.

Aneesh Mohan
Through E-mail

□ In the 'Simple Manual PWM Controller' circuit published in March 2014 issue, rectifier diodes D1-D6 are incorrectly mentioned as 1N4007 in the schematic instead of 1N4001.

Sarita Sharma
Through E-mail

into the microcontroller? I have a development board with Atmega8 microcontroller. How can I modify that code to work with Atmega8?

Vinod
Through e-mail

The author Phani Rohith replies:
You can download the code from source.efymag.com or from the DVD of December 2013 EFY Plus issue. The code is 'arduinocode.ino' and it is not a .hex file. First, open the arduinocode.ino with Arduino IDE and compile it. Then in Arduino IDE, go to Tools→Boards option and select Atmega8. Upload the code into the microcontroller. I hope it will work without making any change in the code.

Gesture-Controlled Robot

I am a regular reader of EFY and I made some successful projects with the help of EFY. I need help in 'Accelerometer-Based Gesture-Controlled Robot' construction project published in May 2013 issue. I used Proteus 8 simulation, but all the components are not available. So, which software should I use? I want to use Atmega16 microcontroller and camera (not MATLAB).

The author Pranjal Joshi replies:
All the hardware I used in this project are available in Proteus 7. Interfacing camera with Atmega16 is not possible because it has only 1KB of SRAM, which is not suitable for camera-image processing.
