

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM AND LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

fore the batteries need to be replaced. The students' timing couldn't be better. Very recently, a UN child's rights committee charged Indian authorities with not doing enough to fight sexual violence after two teenage sisters were gang-raped and hung from a mango tree in a rural village in Uttar Pradesh.

World's fastest maglev toy train

Men love toys, particularly toys that are a hell lot more than just toys. Take this toy for example. Built by Takara Tomy, it uses maglev technology, the same used by those extremely fast trains you have probably ridden in East Asia or watched on TV. Basically, this toy is a maglev train that's capable of putting every toy train built in the history of mankind to shame. The toy can reach speeds of up to 600 kilometres per hour (relative to its scale) which, to the untrained eye, is nothing but a quick blur!

World's fastest maglev toy train (Courtesy: <http://newlaunches.com>)

The train uses its own magnet that levitates it off the plastic track. The track is also laced with magnets, enabling the toy to follow the principles of magnetism to the fullest and do things most of us have never seen a toy do. The air-cushion created between the train and the plastic track reduces friction to such an extent that the toy zips around quicker than you can scream "maglev!"

The train will hit store-shelves by 2015 and will come with a price tag of approximately US\$ 98. But we don't recommend you buy one of these for your offspring, at least until he/she is old enough to spell "magnetic levitating train" in less than ten seconds.

This robot can make you a super-human

Researchers from MIT have developed a robot that helps in enhancing experience of day-to-day activities. This wrist-mounted robot can easily perform tasks with one hand for which you usually need both hands, such as opening jars, twisting screwdriver, stirring coffee by holding mug, lifting heavy jobs, etc.

The device has two extra fingers adjacent to thumb and small finger of user's hand. It has control algorithm which
