

Embedded Systems

Embedded technology is gaining popularity in majority of mechanical or electrical systems. Its application can be found in portable devices, from digital watches and MP3 players to large home appliances and industrial appliances. This month we have some online resources that will help you understand embedded systems better

NIRAJ SAHAY

intel.com

The site has everything that one needs to learn about Intel's embedded offerings. It has a dedicated section that has videos, white papers and training tools on embedded systems. There are many other resources available on the website that are related to Intel's embedded hardware and software. There is a link to Intel embedded community where people can discuss different issues related to design and application. What else do you need!

EmbeddedRelated.com

EmbeddedRelated.com has been around since 2005. Over the years, it has become a very popular resource for embedded systems engineers around the world. The information on the website is very well-organised into different categories. It has blogs, tutorials and a forum, where you can access several active embedded-systems-related discussion groups. It allows embedded systems engineers and researchers to exchange information and ideas amongst themselves.

embedded.com

embedded.com is the resource for everything embedded systems designers and developers need to do their jobs, from the latest products, design and coding trends and tips, source codes, to practical design information, discussions, features and industry happenings. The website also offers community features that enable developers to share their own content, ideas and experiences directly with the embedded community.

ElectronicsWeekly.com

ElectronicsWeekly.com is one of the leading websites for electronics professionals, offering a daily diet of news, analysis, features and business stories. The website also keeps you updated with the latest in the embedded domain.

maxEmbedded.com

maxEmbedded.com is a free and open source platform to share knowledge and learn about concepts of robotics, embedded systems and computer vision. People from around the world, who are enthusiastic about these topics and willing to support the open source community, have shared their knowledge and expertise by means of written tutorials and videos on the website, which is a good place to learn embedded system applications.
