

Swarovski Shine activity tracker

Flying-selfie camera, Nixie, from Intel

3Doodler 2.0

about how ugly these wearables are? It is time for a wearable that is a feminine bliss! Misfit Wearables, in partnership with Swarovski, launched a luxury version of Misfit Shine activity tracker at CES. Named as Swarovski Shine, it is a pretty and intelligent accessory that comes in three sets. These sets range from US\$ 169.99 to US\$ 249.99. Its activity tracker, Crystal, measures your activities and sleep, and syncs with your smartphone.

Lenovo. Yet another good-looking set of smartwatches were announced by Lenovo. The first wearable by the brand, Vibe Band VB10, is priced at US\$ 89. The device is expected to be available beginning April this year. The smartwatch features a curved 3.6cm (1.43-inch) E-ink display, with a resolution of 296x128 pixels. It is compatible with any device running Android 4.4 and higher, and even with iOS devices. The gadget is also a fitness tracker, with an accel-

Nobel 1.0 3D printer

erometer, a calories counter, distance and sleep measurement functions. It also displays instant notifications for calls, SMSes, social media and more.

Intel. Intel's press conference had a lot of innovation to showcase in terms of wearables. Among the noticeable were Intel Curie and the flying-selfie camera, Nixie. Intel Curie is the company's first purpose-built SoC for wearable devices. This button-sized product can be easily integrated into wearables, as small rings to clothes, watches and what not! Curie will start shipping in the second half of 2015.

Nixie, the award-winning product of Intel's Make It Wearable contest, is the first wearable camera that can fly. At your cue, this sporty wrist band unfolds and takes flight to compose and capture the perfect shot without interrupting your moments.

Sony. No launches from Sony this year, but they did showcase a stainless-steel version of their smartwatch 3. Pricing for the stainless-steel

version will be revealed in February. (Sony's smartwatch 3 was launched in IFA last year.)

3D printing arrives for consumers

The presence of 3D printing at CES 2015 clearly indicated a new trend: 3D printing is not just for the industry anymore; it has well arrived for the consumers too! Here are the top stories from the 3D printing zone at CES:

3Doodler 2.0. For people who do not know about 3Doodler, it is a pen that allows you to write or draw in 3D. So, whatever you are writing or sketching is a real object. Isn't that cool? What is more amazing about 3Doodler 2.0 is its size and look. It weighs just 50 grams, which is half of its predecessor, and its all-over size has reduced to 75 per cent! It also supports flexible filament now, which means it is time to draw your own clothes!

Ultimaker2 Go. Considering the growing consumer interest in 3D printing, Ultimaker launched a new 3D printer at a price of just US\$ 1450.

da Vinci Junior. XYZprinting introduced da Vinci Junior with the price tag of US\$ 349. This small machine targets entry-level consumers. Junior has a build volume of 15x15x15cm (5.9x5.9x5.9-inch), weighs 11.8kg, prints from an SD card and features automatic bed levelling, a necessary feature for all new desktop 3D printers.

Nobel 1.0. Another 3D printer by XYZprinting, this printer is capable of printing layer thickness as fine as 25 microns. The printer has a build volume of 12.7x12.7x20.1cm (5x5x7.9-inch). Priced at around US\$ 1500, this will be up for sale in the third quarter of this year.

ROBO 3D. Notable printers from the house of ROBO 3D were R Mega and R Mini. While R Mega is a mega printer in the true sense, with a 99.1x99.1x99.1cm (39x39x39-inch) build area, the R Mini has a build area of only 11.4x11.4x11.4cm (4.5x4.5x4.5-inch). These two printers are priced at US\$ 10,000 and US\$ 399, respectively. ●
