

Spot an Error

And WIN Award!

You can win one thousand rupees plus a certificate from the editor of Electronics For You magazine if you spot and report any factual error in the latest issue of the magazine. Your report will be published in a coming issue of the magazine, giving credit to you.

Though every care is taken in preparation of the content for the magazine, an error can slip in at times. So we invite our learned readers to point out any error that they spot, for the benefit of the other readers.

Rules:

- The error has to be reported before end of the month that is mentioned on cover of the magazine
- The report has to be sent in writing or by email addressed to the Editor, EFY Magazine (editsec@efy.in)
- The error should be of factual nature, in the information published in the magazine, and not a typographical, grammatical or syntax error
- The correct information should also be provided along with the error spotted by you
- In case more than one person reports the same error, the one whose report reaches us the earliest will get the award money
- In case two or more persons jointly report an error, the award money will be divided amongst them
- EFY employees, their family members and friends, and EFY associates and their family members and friends are not eligible
- Decision of the editor will be final in this matter

still access content from the NAS drive using a streaming media player. There are many media player vendors in the market. I recommend Western Digital WD TV Live media player, which costs under ₹ 9000. Though this and other recent media players support Wi-Fi, I recommend connecting the physical LAN cable for more reliable streaming, especially video.

Connect the media player to the television with an HDMI cable. It should recognise your NAS drive and show the content on your television. Your television may not play all video formats, but the media player supports almost all formats, so you need not spend on any file-format-conversion utilities.

Access your media files anywhere

Vendors of NAS home drives provide utilities to access media files from anywhere on mobiles and tablets. To provide security of access, these utilities provide a one-time access-code entry before providing access. The devices connect to the NAS drive through the LAN network.

My home Cloud setup

I have a Western Digital My Cloud 3TB NAS drive that I have connected to my Belkin N600DB modem router, 101cm (40-inch) Sony LED first-generation smart television that I have connected to this router through a LAN cable and Dell all-in-one PC that is connected by WLAN, and so are our three mobiles and two iPads.

I have a second small television in my bedroom, which does not have a network interface. I have connected a media player that is connected to the router. The media player connects to the television using HDMI and routes all media in my home network to my television. My entire music CD and online collection, purchased through iTunes, is located on this NAS drive under a public folder that I have named Music. Similarly, I have copied all photos from our digital camera, mobiles and tablets to another public folder named Photos. All videos, shoots from camera and movies are kept in a similar directory named Videos.

All media files are now accessible not only on mobile devices, but can be streamed to the networked televisions, either through directory or WD TV Play media player (from Western Digital).
