

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM and LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

is focused on developing a technology that can self-destruct to avoid any kind of data loss.

Being Black will come with dual-SIM support to enable it to access multiple mobile networks at the same time. The phone will come with in-built biometric sensors and direct satellite connectivity. Boeing is currently testing the phone with a limited user-base.

A bracelet that displays your Android screen on your skin

Have you ever imagined a wearable device that can project the impression of your Android device on your skin? Well, it is a reality now. The device is known as Cicret bracelet.

It can be worn on the wrist, and a small, light beam on the device projects the Android device on the forearm. Then, the arm becomes the face of the Android display and you can access the display as required. You can receive incoming calls, and read and reply to emails, among other features.

Cicret bracelet

Cicret has an embedded system that includes a microprocessor, memory card, micro USB port, battery, Bluetooth, Wi-Fi chip and an LED lighting facility. The memory card has two formats, 16GB and 32GB. The development team has asked for US\$ 1 million funding so that the project can be launched in the market. The app's beta version is available on Google Play.

A robotic sea turtle for underwater surveillance

A smart guiding robot is ready for oceanic surveys, courtesy a team of Indian-origin scientists, led by associate professor, S.K. Panda, from National University of Singapore (NUS). This robot can perform surveys under the ocean and can inspect pipes and cables, ship hulls and propeller shafts.

The sea turtle can roam around underwater and dive deep into the water, just like a real turtle. To dive deep into the water in a vertical angle, this robotic turtle will use its front and hind limbs for gait movements. It is expected that very soon this team will produce multiple autonomous tiny robotic sea turtles and fish.

These robots are aimed at particular missions, like diagnosing nuclear wastes, resting underwater and similar dangers that might be harmful for human beings. Panda
