

Substituting surmounting imports for industrial growth

PHD Chamber, under the electronics and engineering goods committee, recently organised a seminar on electronics with a focus on substituting the surmounting imports in the electronics sector by creating a conducive environment for domestic manufacturing in the sector. The vision is similar to Prime Minister Modi's Make in India.

The chief guest, Ajay Shankar, former member secretary, National Manufacturing Competitiveness Council, seemed confident about net zero imports by 2020. He said that Indian electronics industry is still at an infant stage and India needs to create an investment case for itself. Elaborating on the current framework, he said that the electronics fund can be a game-changer. However, the entire ecosystem needs to gear up and be conducive for the benefit of the industry. According to him, manufacturing as a sector itself is undergoing a transformation. Focus now has to be on adding value to our products so as to attract investors and availability to critical information that can be used for making an informed decision.

The other speakers included Deepak Bharadwaj, head corporate affairs, Samsung India, Bikas Kr Singh, head-government affairs, South Asia, Lenovo, Amrit Marwani, CMD, Sahasra Electronics Pvt Ltd, Ramesh Chopra, founder, EFM magazine, and Kapil Sharma, senior consultant, DeitY, government of India.
