Google to open campus in Hyderabad

Google has plans to open its own campus in Hyderabad, and has decided to sign MoU with Telangana government. The government has shown interest in making Hyderabad a Wi-Fi-enabled city, and companies, like Airtel, Vodafone and a Taiwan based company, have been approached for the same. The Taiwan based company is the key company behind Wi-Fi-enabled city, Taipei.

Excise duty concessions revoked

The government of India has withdrawn excise duty concessions on a number of items including electronics (chapters 84 and 85), which include security items and automotive, with effect from January 1, 2015. The effective rate of excise duty will be 12 per cent. This step, which has been taken to meet the challenge of fiscal deficit, is considered a setback to the electronics industry's growth.

Infineon Technologies acquires International Rectifier

Infineon Technologies AG has acquired International Rectifier, following the approval of all necessary regulatory authorities and International Rectifier's shareholders. The acquisition is expected to drive greater economies of scale in production, strengthening the competitiveness of the combined company.

Fluke sets stronger foot in India

Founded in 1948, Fluke has registered the organisation as Fluke Technologies India Pvt Ltd, with effect from November 2014. The company had acquired TTL Technologies Pvt Ltd in 2012, which was the first step taken towards being closer to the customer. Since then it has expanded its portfolio offering for specific vertical markets, like O&G, energy, utility and retail.

that India will soon become an exciting venture for the initiative and its importance for good governance and highlighted the turnover of US\$ 100 billion in the IT industry.

Koraput tribal pockets get 122 solar-powered pumps

Koraput district administration has installed 122 solar-power based pumping systems in order to provide piped water in those hard-to-reach tribal zones. The solar-powered submersible pumps draw 5,000 to 20,000 litres of water every day. These pumps operate automatically, and water is stored in an overhead tank, according to executive engineer (rural supply and sanitation), Koraput, Monaranjan Mali.

A solar array of 300-800W is set up near a bore-well, with an HP submersible pump inside. Power is generated from photo-voltaic solar cells, and the pump operates through this power. The scheme has been made successful by Odisha Renewable Energy Development Agency, while the funding has been done by the Union government. The solar panel's longevity is expected to be 15 to 20 years.

Make in India workshop focuses on curbing Chinese imports

Chinese imports need to be reduced, claims the Indian industry. The industry also wants that the inverted duty structure should be revised and an import-substitution policy should be designed to help improve the domestic manufacturing sector. A Make in India workshop was organised by the government and these issues were raised during discussions.

In order to protect domestic manufacturers from competition from Chinese imports, companies have urged the government to increase duties within bound rates at World Trade Organisation, specifically in sectors like power equipment, capital goods and heavy industry.

India's average tariff rate is 48.6 per cent and the average basic customs duty is approximately 14 per cent. The government has also been requested by Indian companies for domestic content requirement norms, which need to be expanded further to boost local manufacturing.

India-South Korea to expand business investments

India and South Korea have decided that they will improve their strategic partnership by building ties in various sectors, like ship-building, electronics, defence production, infrastructure and energy. The two countries have also decided to partner with each other in areas like nuclear energy and cyber security.

External affairs minister, Sushma Swaraj, and her South Korean counterpart, Yun Byung-se, have reached this decision at the eighth Joint Commission meeting. Swaraj said that South Korea is one of the most important contributors to India's economic growth, and she has invited South Korean firms to make investments in the country as part of Make in India initiative. Yun acknowledged government's initiatives and agreed that South Korean companies will be motivated to expand their businesses in India.

Indian LED market expected to grow 50 per cent

The LED market in India has seen a commendable growth in the last five years. It has grown more than 50 per cent during financial years 2009-10 to 2013-14, and is expected to further sustain its growth rate for the next five years at least.

Looking at this growth, the government of India has announced many incentives and measures in order to prioritise manufacturing of LEDs in the country. There are several LED lamp assembling companies in India that design and develop LED lamps but import LED chip elements.

A report on the sector highlights India's demographic and macro-economic indicators, government regulations, policy and different kinds of licences and registrations required for the LED lighting industry, duties and taxes on LED, especially LED lamps, LED industry and the production of LEDs in India, import and export of LEDs, Indian consumer, prices of LED lamps in the Indian market and detailed statistics of Indian LED market.
