

an organisation, providing design teams, production departments and others with access to simulation tools built by experts.

The application builder allows COMSOL Multiphysics software users to build an intuitive interface around their COMSOL model that can be run by anyone, even those without prior simulation experience.

This server is the engine for running COMSOL apps and the hub for controlling their deployment, distribution and use. After creating an app with the application builder, the server provides engineers and researchers with a cost-effective solution for managing how the app is used, either within their organisation or externally to a worldwide audience.

Bluetooth 4.1 network processor

STMicroelectronics has released the latest version of BlueNRG Bluetooth SMART network processor, which supports the latest Bluetooth version 4.1 enhancements and introduces 1.7V operation for longer-lasting battery-powered applications.

The processor integrates a complete Bluetooth PHY and 2.4GHz radio, ARM Cortex-M0 microcontroller running Bluetooth 4.1 protocol stack and a dedicated AES-128 security co-processor. The API, power management and flash are already integrated, allowing direct connection to the application host controller, using a simple SPI bus leveraging clear software, partitioning between the network processor and host microcontroller.

8000MP camera

The DINION IP ultra 8000MP camera supports a wide-angle overview and multiple focus points on a single screen to focus on details without losing the bigger picture. Its 12MP,

or 4K, ultra-HD resolution allows any given subject to be viewed in hitherto unknown detail.

Street-light controller

Photonics intelligent street-light controller is specially designed for

energy saving in conventional street-light systems. It incorporates a real-time clock, with in-built battery.

DIGIPASS authenticators

VASCO has launched two new DIGIPASS authenticators with Bluetooth capabilities. DIGIPASS 875 is a

smartcard-reader solution, whereas DIGIPASS GO215 is a compact, one-button device offering powerful, portable and flexible two-factor au-

thentication and digital signing. Both devices provide enhanced security for the growing number of mobile devices.

Business IP Phone

SPARSH VP110 is an entry-level SIP phone that redefines the desktop telephony experience and quality of business communications. Key features of the device are:

Enhanced desktop viewing. 132x64 pixel graphical display

Easy to use. Context-sensitive and fixed function keys

Clear voice. Full-duplex speakerphone with AEC, VAD, CNG

Secure communications. TLS/SRTP for voice security

Simple power management. Integrated PoE (802.3af)

Suitable for mass deployment.

Auto provision. TR069

Future-ready. IPv6 ready, PC and LAN ports

Phone book. Stores up to 1000 entries

Installation. Wall mount, table-top

Solid-state call indicator

This solid-state call indicator has been designed to replace conventional electro-mechanical buzzers-switch indicator assembly.

It does not have any coil, switch and relay. It has an electronic circuitry that senses the received signal and activates an LED to indicate the call station number. Constant or repeated call signals do not affect its internal working. The call can be reset by a push switch on the indicator board. It has a soft-tone buzzer that sounds for a pre-set time on receipt of each signal.
