

"We prefer made in india components and train our vendors to ensure that quality systems are in place"

SANJEEV SAINI
DIRECTOR-TECHNICAL, SU-KAM
POWER SYSTEMS LTD

Q. How important is it for your business to source the correct component from the right vendor? Does not being able to do this impact the business?

A. Sourcing the correct component from the right supplier or manufacturer is very important because a product's life depends upon the quality of the components used which, in turn, depends upon the manufacturing process and technology being used by the component vendor. A right supplier is one who can deliver the correct part on time to meet scheduled and sudden manufacturing needs, if any.

If the supplier is not up to these expectations, it surely impacts the business. The manufacturer of the end product can face several issues including premature product failure, increasing servicing costs, reduced profit margins and, at times, heavy losses due to inconsistency in product's efficiency.

Creating a strong connection between supplier and buyer is integral to the smooth functioning of the supply chain. Understanding the importance of the right supplier, **Sanjeev Saini, director-technical, Su-Kam Power Systems Ltd**, shares his views on how to choose and retain good suppliers

Besides, if a vendor is not capable of delivering the required quantity on time, then the end product will not be manufactured and this could result in a loss of revenue or even being pushed out from the business.

Q. Which types of electronic components do you procure?

A. We procure both active and passive electronic components. Among the active electronic parts, we procure semiconductor devices like MOSFETs, IGBTs, SCRs, thyristor modules, transistors, diodes, integrated circuits, opto-couplers, communication interface devices, LCDs and solar PV modules. The passive electronic parts we procure are capacitors, resistors, inductors and transformers, as well as PCBs and PCBAs.

Q. What are the categories of electronic materials, components, products, equipment or services that you procure regularly?

A. Apart from the passive and active electronic parts mentioned earlier, we also procure electro-mechanical parts like relays, contactors, MCBs, fuses, electrical connectors, etc, as well as surge protection devices and mechanical parts like metal and plastic enclosures, hardware, connectors and wire harnesses/cables.

Q. Do you plan to invest in capital equipment for electronics manufacturing in the coming year?

A. We plan to invest in the following capital equipment:
