SMARTCHIP MICROELECTRONICS CORP

SmartChip Micro Electronics (SMC) was founded in November 1995 as an IC design house while also manufacturing other electrical components. SMC made rapid progress as an IC designing house owing to its high quality products and R&D, gradually making a transition and entering other manufacturing technologies such as RFID modules, tags and readers. August 2002, SMC entered greater China market as a supplier and manufactures for RFID components. Its RFID product bandwidth ranges from the conventional tags to animal/pet recognition to underground tags for innovative use. The company also produces RFID module to assist other manufactures across the globe. Since its inception, the company has expanded from being an entry level RFID manufacturer to a technical leader in the aforementioned domain. SMC's motto and aim is to pursue innovation and creativity in every direction and pertaining to that, SMC has now entered other domains such as NFC technology, wearable products and other niche products which are both unique and customer oriented. The success of SMC's product can be highlighted by the fact that it won the medal of recognition in the category of innovative products during the Taiwan Taitronics 2013.
