XINOE SYSTEMS PVT. LTD.

XINOE [eXperienced International Network of Engineers] Systems Private Limited, headquartered at Delhi-NCR, is jointly operated by Binary Semantics Limited, an information technology R&D company and Inxee Systems Private limited, an embedded / VLSI technology R&D company. Xinoe is well equipped with a state-of-the-art laboratory, training facilities and workstations with all the tools required for hands-on experience of VLSI design – ASIC/FPGA, CS/IT and embedded systems technologies. By bringing together the very best of pedagogy and industrial exposure the brand creates learning experiences that are faster, flexible, focused and integrated with practical.

XINOE: IOT Training Simplified

Students

By participating in Xinoe's training program, professionals and freshers get to learn the usage of spearhead tools and techniques and experience real world R&D projects in VLSI, Embedded, CS/IT technologies. This helps them create opportunities for themselves and build an exciting career, additionally finding placement opportunities with the brand's diverse and global client list.

Corporates

The training programs help corporate resources from the likes of DRDO, LG, etc to learn the art of innovative thinking and experience turnkey techniques and know more about products that are new to VLSI/CS/IT/Embedded industry domains. This helps them create solutions to problems faced by their organisation.

Employers

Employers looking for VLSI – ASIC/FPGA, embedded, CS/IT hardware and software resources, for short term resource evaluation, campus recruitment or hiring, can submit their resource requirement in specific domains, to schedule the programs in line with their resource requirements.

YONTRO MECHATRONIC SYSTECH

Yontro is an enterprise consisting of a group of energetic and dynamic, young professionals, who control the operations of the company, to translate the plans and designs of a visionary and veteran of more than 25 years experience, into a successful business enterprise. The company designs and develops equipments, tests them to ascertain that they are adopted for the local conditions and fine tuning them for rugged operation even in harsh conditions. Most of the equipments are either import substitutes or specially developed to suit the exact requirement of a specified operation. Now with Yontro, the company aims to market and promote its innovations and make them available to the production professionals of the world. Over the years, the company has manufactured a range of products including PCBA equipments like pre-forming machines, component insertion line, soldering systems for through-hole and SMT, final assembly and touch-up lines; wire processing equipments like wire sizing machine, wire stripping machines, terminal crimping machines; conveyor systems like belt, chain, free flow, gravity roller, power roller, slat, slat band, modular plastic conveyors etc. and automation solutions and SPM, pneumatic and PLC based automation solutions. The company also makes special purpose machines for any tailor made requirement for production or testing.
