

The Internet of Things

Creating a network and connecting embedded devices to the Internet has always been fun. This month we have some websites that will introduce you to the world of the Internet of Things (IoT) and allow you to explore more

NIRAJ SAHAY

blogs.microsoft.com

This website introduces you to the IoT and Azure IoT services provided by Microsoft. It has many inspirational success stories about the IoT. Microsoft's official IoT blog is the place to discover how businesses are unleashing the potential of the IoT by harnessing Microsoft's cloud services, business intelligence, data analytics tools and operating systems. The website has a lot for IoT fans to discover.

openremote.com

OpenRemote is a professional, open source middle-ware for the IoT. You can integrate any device or protocol, and design any user-interface and intelligent system. Whether you are a do-it-yourself (DIY) enthusiast, an integrator or designer, a distributor or service provider, or an OEM, OpenRemote offers you a solution. In the DIY section, the website features Free Designer, which consists of an online designer, a downloadable controller and panel apps. The site has all the information required for getting started with OpenRemote, the open source automation platform.

thethings.io

You build cool things and then you connect it to the Internet. thethings.io is the missing link between your networked products and your website and mobile app. It makes your IoT work by providing a cloud solution, front-end UI and interoperability, so that you get more. It offers a free account where you can connect ten devices with very few limitations. The site charges one Euro per device per year for full-access to its back-end, analytics and interoperability features. With this, you can store and query unlimited data.

contiki-os.org

When we talk about the IoT, we cannot miss the operating system powering it. Contiki is an open source OS for the IoT. It connects tiny, low-cost, low-power microcontrollers to the Internet. The website has links to tutorials that help you get started with Contiki. It also has an active community, which can be very helpful for a beginner.
