RBI highlights norms for trading platform for MSMEs receivables

RBI has permitted setting-up an exchange based trading platform in order to help MSMEs facilitate financing of bills raised by small entities to corporate and other buyers, including government departments and PSUs. While issuing the guidelines, RBI notified that trade receivables discounting system (TREDS) should entail minimum paid-up equity capital of ₹ 250 million and non-promoters would not hold more than ten per cent of equity capital of TREDS.

Government asks Samsung, LG to establish manufacturing facilities

The government of India has extended an invitation to South Korean giants like Samsung Electronics and LG Electronics to establish their manufacturing units in India, as part of Make in India initiative.

The minister of communications and information technology, Ravi Shankar Prasad, explained that the government aims to establish 20 manufacturing clusters, and the states will benefit

financially if they provide 50 acres of land each for the clusters. India is putting in all possible efforts to transform the country into a smart digital nation.

Freescale acquires Zenverge and its transcoding technology

Freescale Semiconductor has acquired Zenverge, a semiconductor company and developer of advanced HD content processing ICs. Zenverge's transcoding technology enables conversion of one media stream into multiple streams, each individually-formatted and optimised for specific Internet-connected devices or platforms, where it will be displayed. Among the supported formats planned is the ultra-HD (HEVC) standard, which features an outstanding 4K resolution while delivering up to 50 per cent bandwidth savings due to highly-advanced data compression. This technology also allows secure-sharing of HD video and other rich digital content, while providing seamless integration of content distributed across the cloud and throughout the world's networks.

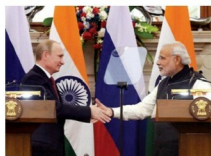

ceived more than 50 proposals for resources such as automotive electronics, consumer appliances and strategic electronics. It has also provided an in-principle approval for establishing ten electronics clusters with investment of almost ₹ 50,000 million via public-private partnership (PPP).

Russia offers to make one of its most advanced helicopters in India

In a major boost to India's defence sector, Prime Minister Modi, in a joint statement with Vladimir Putin, president of Russia, said that Russia has offered to fully manufacture in India one of its most advanced helicopters. Modi said that he discussed a wide range of new defence projects with Putin.

Modi also proposed that Russia should locate manufacturing facilities in India for spares and components for Russian defence equipment.

Russia has also agreed to supply nuclear reactors to India. These will have the highest standards of safety

Russian President Vladimir Putin and Prime Minister Narendra Modi shake hands during their joint press conference at Hyderabad House

in the world. This provides a major boost to the Make in India drive.

Procurement from MSEs made mandatory for government

Kalraj Mishra, union minister for micro, small and medium enterprises (MSMEs) informed Lok Sabha recently, that it is mandatory to procure 20 per cent of products and services from micro and small enterprises (MSEs) for all central public sector units (CPSUs), central government ministries and depart-

ments. This procurement will come in effect from April 1, 2015.

As per the government release, certain efforts adopted by the government to enhance procurement from MSEs involve one-on-one interaction with CPSUs to enhance procurement from MSEs, stakeholder consultation workshops to generate awareness about and understanding of the policy, facilitating match-making of buyers and suppliers, and setting-up of grievance cells. For the same, a review committee has been constituted for development of MSME sector and a software based on ITC HS code has been developed.

MSME sector accounts for eight per cent of GDP and contributes around 40 per cent of the total exports and 45 per cent of the manufacturing output. According to the fourth All India Census of MSMEs, there are 36.176 million enterprises in this sector, amongst which around 1.564 million are registered.

Internet of Things (IoT): India of Tomorrow

The Internet of Things (IoT) is on the verge of transforming every aspect of everyday life—a paradigm shift in how we interact with the environment and with each other. IoT-centric solutions can transform India completely, primarily in the domains that are the main stay of existence, namely, agriculture, security, healthcare, energy and education, to name a few. The IoT, in combination with sensors and wearables, heralds enormous opportunities for fundamental research in chip design, system engineering, new materials, sensors, communication, embedded software and various allied fields.

The IoT and wearables opportunity is huge and rapidly becoming the next-big wave post mobile-phone wave, which is going to impact all aspects of electronics, semiconductor and IT industry. According to Frost and Sullivan (F&S), there would be 80 billion connected devices in the year 2020, while Cisco Ventures predicts a market of more than US\$ 10 trillion for the IoT industry by 2022 worldwide. India has the potential of more than US\$ 10 billion for the IoT by 2020.
