

EFY Note

The source codes of this project are included in this month's EFY DVD and are also available for free download at source.efymag.com

```
$ sudo python mcplight9.py
```

Now you will see different characters visible on your dot-matrix display as shown in Fig. 8. Each character will be displayed on the LED matrix one after another.

Project 2: Multiplexing of 5x7 dot-matrix display

Similarly, by using Adafruit libraries, as you did in the first project, you can do the multiplexing of 5x7 dot-matrix display. The libraries include Adafruit_I2C.py, Adafruit_MCP230xx.py, efy.py and mcplight9.py.

First make the connections as shown in Fig. 12. Then open the nano editor by writing the command:

```
$ sudo nano efy.py
```

Now write the efy.py code. This python script will create the word EFY

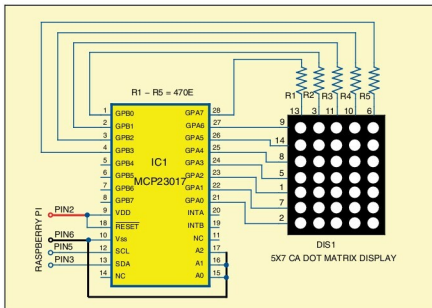

Fig. 12: Circuit diagram of 5x7 dot-matrix display

on the 5x7 LED matrix. Save and exit the nano editor.

Now run the code by using the command:

```
$ sudo python efy.py
```

It will display E, F and Y characters

sequentially, one by one, on the 5x7 dot-matrix display. ●

The author is an avid user of open source software. Professionally, he is a thermal power expert working as an additional general manager at NTPC Limited

DO YOU HAVE EXCITING SOFTWARE FOR ELECTRONICS DESIGN ENGINEERS?

Get it bundled with the
