

Raspberry Pi: Getting Started

Raspberry Pi has always been a favourite for engineers and hobbyists. Here are some of the websites that will help you understand and start using your Raspberry Pi

NIRAJ SAHAY

raspberrypi.org

The Raspberry Pi is a credit-card sized computer that plugs into your TV and a keyboard. This computer can be used in electronics projects, and for many of the things that your desktop PC does, like spreadsheets, word-processing and games. The website is the home for this little wonder and is updated with all the information that you would need to get started. The forum on the site is very active and has approximately 95,000 members discussing nearly 75,000 topics.

http://elinux.org/RPi_Hub

elinux.org

The purpose of this website is to preserve and present information about the development and use of Linux in embedded systems as well as open source projects and tools for general embedded development. The website has pages related to different embedded hardware. Each page has lots of information on the boards that you want to try out. The site can prove to be a good resource for learning Raspberry Pi.

adafruit.com

Adafruit was founded in 2005 by MIT engineer Limor 'Ladyada' Fried. Her goal was to create the best place online for learning electronics and making the best designed products for makers of all ages and skill levels. The site has 503 tutorials on different topics and is growing daily. Apart from shopping, blogs and forum the site has a dedicated section for understanding different electronics hardware. The tutorial on Raspberry Pi in the learning section of the website is divided into different parts and caters to all your learning requirements on the subject.

<http://wiringpi.com/>

wiringpi.com

The Raspberry Pi has a 26-pin general-purpose input/output (GPIO) connector which carries a set of signals and buses. There are eight general-purpose digital I/O pins that can be programmed as either digital outputs or inputs. The website is a good resource for developers designing with Raspberry Pi. WiringPi is a GPIO interface library for the Raspberry Pi and includes a command-line utility gpio which can be used to program and set up the GPIO pins.

suntimebox.com

If you are a beginner and do not have any knowledge about this little computer, this is the right place to start. The site has good tutorial on Raspberry Pi and Android programming. The site teaches you how to use, program and understand the Raspberry Pi in simple-to-understand language. The complete tutorial is divided into different courses. These courses use practical examples, visual images, videos and audio clips to explain many of the concepts used for learning the Raspberry Pi.
