

Incubation centre for electronics start-ups gets DeiT Y nod

The Department of Electronics and Information Technology (DeiT Y) has given a go ahead to the setting up of an incubation centre to provide physical as well as technology infrastructure to electronics start-ups from across the country. After incentivising and nurturing the IT services industry during its initial years, the Software Technology Parks of India (STPI) is looking to do the same for product companies, specifically in the electronics sector, with the now approved 'Entrepreneur Park' to be set up in the national capital. The same will boost domestic manufacturing of electronics and encourage entrepreneurship across India.

Under the project, the government plans to set up an incubation centre for electronics start-ups in Delhi. This centre aims to incentivise ten companies every year over the next five years. These companies will be short-listed by a board comprising stakeholders from the government as well as the industry and academia. The proposal has been sought by STPI in association with the Delhi University and India Electronics and Semiconductor Association (IESA).

Once up and running, the incubation centre will give electronics start-ups unrestricted access to experts within their domain as well as mentors, shared consultants and services. Further, these start-ups will be able to seek investment from foreign investors and venture capitalists, among others, to boost their growth and potential.

JVs to oversee construction of renewable energy projects

In line with the BJP-led NDA government's plan to come out with a comprehensive National Energy Policy to balance power generation in the country through conventional and

Piyush Goyal is new energy minister

Piyush Goyal has been appointed as the Central government's new minister for Power, Coal and New and Renewable Energy. He is expected to pay special attention to solar energy. The ministry of new and renewable energy (MNRE) currently oversees the Solar Energy Corporation of India (SECI), which is responsible for directing the Jawaharal Nehru National Solar Mission (JNNSM).
