RECENTLY INTRODUCED IN INDIA, FROM NEAR AND FAR

TEST & MEASUREMENT

All-in-One Instrument

National Instruments (NI) has launched VirtualBench, which has five essential instruments needed by any designer/engineer—mixed signal oscilloscope, digital input/output, programmable power supply, digital multimeter and function generator—incorporated into a single bench-

top instrument with software interface.

VirtualBench reduces the number of instruments, space requirement and cost for the users. The features that make it revolutionary are the mixed signal oscilloscope, high integration with today's technologies, and very low price compared to the equivalent devices of other leading brands. The instrument can be connected to PC using the standard USB port, or connected to PC and tablet using Wi-Fi. The user interface is very simple with all functionalities and controls integrated into a single window, and much similar to the UI of existing modular instruments.

Digital oscilloscopes

Rohde & Schwarz has introduced RTE digital oscilloscopes that offer fast and reliable solutions for everyday test and measurement tasks such as embedded design development, power electronics analysis and general debugging. These are available with bandwidths of 200 MHz to 1 GHz.

The scopes' highly accurate digital trigger system with virtually no trigger jitter delivers precise results. The single-core A/D converter with more

than seven effective bits almost completely eliminates signal distortion. With a sampling rate of 5 GS/s and a maximum memory depth of 50M samples per channel, the oscilloscopes can accurately record the long signal sequences required when analysing the data content of serial protocols such as I²C and CAN.

Insulation testers

The new MI 3200 TeraOhm 10 kV is a digital diagnostic insulation tester manufactured by Metrel and marketed by Rishabh Instruments.

MI 3200 enables high insulation resistance measurements up to 10 T Ω , step voltage test, PI, DD and DAR calculation, capacitance measurement and withstanding voltage test. The large LCD screen enables real-time graph to be displayed. Results can be stored and downloaded to a computer via USB or RS232 connection with the help of optional software.

Major applications include testing insulation resistance of rotating machinery, cables, transformers, HV generators, surge arresters and effective measurements in high noise environments, such as charged substations and switchyards.

COMPONENTS

Wire-to-board and wire-to-wire connectors

FCI has launched Minitek Pwr 3.0 and Minitek Pwr 4.2 wire-to-board and wire-to-wire connectors.

Minitek Pwr 3.0 is designed for power applications with current rat-

ings up to 5A per contact. Engineered for wire-to-wire and wire-to-board applications, its crimp and snap-in receptacles are used to terminate AWG 20 to 30 wires. Header assemblies for wire-to-board interconnections include vertical and right-angle variants.

Minitek Pwr 4.2 is manufactured for high-current and high-density applications, and supports up to 9A per contact. Both the products are designed for dual-row and 2 to 24 circuits, but feature greater versatility due to their diverse wire-to-wire, wire-to-board and wire-to-panel mount capabilities. Its crimp and snap-in receptacle is used to terminate AWG 16 to 28 wires.

LDO line-up

ROHM's new 16-model line-up of LDOs is optimised for microcontroller power supplies in automotive body and power train systems. The new power supplies in the BD4xxMx series, together with the BDxxCOA series, have been designed for application in car infotainment systems, bringing the total number of automotive-grade LDO offers to 43.
