Automotive accelerometer

STMicroelectronics has launched AIS-3624DQ, a 3-axis accelerometer with digital output. It is the first to provide a

full-scale range of $\pm 24g$ (acceleration of gravity) while

meeting the automotive industry's demanding

AEC-Q100 reliability stress tests. The AIS3624DQ claims to bring

all the benefits of ST's market-proven stacked-chip technology to the automotive market. This solution is based on company's 20.3cm (8-inch) wafer manufacturing of MEMS products and offers a more competitive solution than the others who produce on 15.2cm (6-inch).

The product offers selectable full-scale range including 6g/12g/24g. Other features of the automotive accelerometer include 16-bit data output, two digital output lines (interrupt generators), nine user-selectable output data rates (ODR), power down, low power and normal power modes, SPI and I²C digital output protocols, embedded self-test and up to 10,000g shock survivability. Housed in a QFN 24L (4x4x1.8 mm³) package, the AIS3624DQ is currently available as engineering samples.

POWER SUPPLIES

Home UPS system

Luminous Power Technologies introduced Zelio in April, a pure sine-wave, state-of-the-art home UPS system, designed to work with the most sensitive home appliances. Zelio has a unique feature that displays the power back-up in hours and minutes, which allows consumers to plan their day and manage

their appliances during a power outage.

The UPS can be used to provide power backup for all domestic appliances and is equipped with various in-built protection features. This system with next-generation architecture has a digital signal processing core that yields a high performance.

Power converter

Mornsun recently launched a higher power Din-Rail AC-DC power supply—the LI120, following the LI24 (24W) / LI72 (72W). It acts as the power supply for the industrial bus in the control cabinet, can provide all units with 24V supply, and can be used in industrial control/electric and other distributed power systems.

The LI120 adopts a new circuit design and embeds power factor correction,

which takes its efficiency up to 92 per cent, while pushing its standby power consumption down to 0.75W. With 35mm installation

width, it saves considerable space for users. In addition, the Din-Rail mounting protects a circuit from the damages caused by over voltage, overload or continuous short circuits.

SOFTWARE

3D PCB Design Tool

Altium has announced the latest update to its signature PCB design software, Altium Designer 14.3. The software has been updated to provide improved support and new features that facilitate design reuse

and more efficient electronics design.

Previously, MCAD designers had to model rigid-flex boards as sheet-metal parts, which limited the accuracy of the design. With this update, designers can open the folded model of a flexible PCB in mechanical design tools to ensure form and fit are correct. In addition, they can run detailed analysis on the PCB, checking on connections and heat flow.

Altium Designer 14.3 delivers improvements to schematic wire dragging, with development focused on maintaining connectivity while improving productivity. This includes improvements to the handling of overlapping wires, net labels and junctions.

LEDs & LED LIGHTING

LEDs for headlights

Everlight's high-power Argus series of LED headlight modules feature low thermal resistance and

a high heat dissipation rate. The overall package size is reduced to allow flexible space for the component manufacturers to design their headlight products.

This is a line of high-performance headlight LED modules based on ceramic substrates featuring high heat dissipation rate up to 170W/mK, far better than those provided by conventional ceramic substrates. A single chip running at 1A provides up to 1200lm. With a properly designed heat dissipating mechanism, a single chip provides highly stable performance even at 1.2A. The single-chip Tj design that has passed the 150°C high-temperature test is perfect for the harsh, extremely hot environment in a headlight assembly.
