

SHAVISON™ Peripherals for Industrial Automation

Analog Timers

Operating Modes	ON Delay, Interval, Star Delta, Cycle ON First OFF First, Forward-Pause-Reverse, True power OFF
Time Ranges	30 Sec, 60 Sec, 3/10/30/60 Sec/Mn, 1/10/10/30 Sec/Mn/Hr, 1/24/48 Sec/Mn/Hr, 1/10 Sec/Mn/Hr
Output Contact	# SPDT (1 C/O) # DPDT (2 C/O)
Contact Rating	5A @ 230VAC/ 24VDC
Supply Voltage	110VAC, 230VAC, 415VAC, 24VAC/DC, 20-240VAC, 12-240VDC

Hooters with Flasher

Size	72*72mm 96*96mm 144*144mm
Tone	2 Tone, 4 Tone, 110dB Output
Flasher	With Flasher/ Without Flasher
Accept Function	Push Button On Front and/or Terminals on Back
Volume Control	Yes, 10 to 100%
Supply Voltage	230VAC, 24VDC, 20-240VAC, 12-240VDC

Also Available

- SMPS (Din Rail Mount)
- Relay Interface Modules
- SSR Interface Modules
- FRFCI D-SUB connector
- Opto Interface Modules
- Diodes Resistor Modules
- Power Distribution Modules
- Redundancy Modules
- Analog Signal Converters
- Dedicated Controller
- Products For Special Applications

Dealers enquiry solicited

good enough for most buyers. Moreover, it doesn't compare well to the likes of Xperia Z2, Galaxy S5 and One (M8).

This leaves us with the layered versions of high-end Android smartphones. Let us start with the one that is selling the most, the Samsung Galaxy S5. It has a 16-megapixel camera, which shoots amazing pictures, albeit a little oversaturated on the colours. The Galaxy S5 also has one of the best screens in the market. Its Super AMOLED display is a treat for any user, and its screen is slightly bigger than that of Nexus 5 at 13cm (5.1-inch), which makes it not so tough to use with one hand either.

The problem with the S5 though is in its UI and design. The S5 looks and feels too plastic, even with its faux-leather dotted back cover. Samsung has wasted too much space on the screen and the UI just doesn't give you a high-end feel. Why is it a big deal? Because you'll be spending ₹ 51,000 to buy it.

Xperia Z2 and HTC One (M8) on the other hand have hit the jackpot when it comes to the design and pricing. Both these devices are priced at ₹ 49,900, which is a very strategic pricing in this range, and they both have pretty good camera. The Xperia Z2 has a 20.7-megapixel EXMOR RS camera, while the M8 uses HTC's Ultrapixel technology. Our choice is the M8, which has HTC's new dual-lens technology along with the 4-Ultrapixel camera. Xperia Z2 seems to make the pictures a bit dull, compared to the M8 and S5.

All the three are flagships from the respective companies and lack nothing in terms of processor power. While M8 and Z2 have the 2.5GHz Snapdragon 801 processor, Galaxy S5 sports Samsung's Exynos 6 octa-core processor. But for us, HTC gains a big plus because of the Sense 6.0 UI that comes with M8. HTC's custom UI, while being as far away from pure Android as possible, is arguably the best of all the UIs. Sony's UI, though pretty simplistic, doesn't really add much to the device.

Mid-range smartphones

If you are looking to spend under ₹ 25,000, you have options like Moto G, Micromax Canvas Knight, Karbonn Ti-

tanium Octane, Octane Plus, Titanium Hexa and some others.

Selection in this range is quite tricky actually, because while the prices in the low-end and high-end smartphones remain quite close, the mid-range is pretty vast. For example, while Moto G is priced at around ₹ 14,000, the Canvas Knight and some others are priced nearer to or above ₹ 20,000. So, while the choices are more, the price difference is also bigger.

The best value for money in this segment is definitely given by Moto G, which has a 1.2GHz Qualcomm Snapdragon 400 quad-core processor along with 1GB of RAM and the KitKat OS. Canvas Knight and others sport octa-core processors. So, if you want to spend less than ₹ 15,000, Moto G could be the best choice for you.

Above ₹ 14,000, the competition is really between Canvas Knight and Karbonn's devices, for now. But Canvas Knight doesn't seem to do well in terms of battery life. With the exception of Titanium Hexa, the others are all octa-core units, while the Hexa has a hexa-core processor. Karbonn Titanium Octane though is the cheapest octa-core device available in the market, at ₹ 14,490.

Low-end smartphones

In the under ₹ 10,000 range, you can find good devices priced at around ₹ 8000 or less. But there seems to be only Moto E smartphone in this range that sports the KitKat OS. The device is priced at ₹ 6999 and gives you a 5-megapixel rear camera, a 1.2GHz dual-core processor, 1GB RAM and a pure Android experience.

Moto E right now is the best smartphone to buy in this range. We don't see a better device coming up in this range anytime soon. Even though KitKat is perfect for such devices, with the additional layering that OEMs do, it is going to be hard to match the performance that the Moto E delivers. Motorola has made a masterstroke with this device and it is no surprise that it went out of stock less than 24 hours after it was launched. ●
