

Guardian GA-1 motorcycle helmet (Courtesy: www.augmentedrealitytrends.com)

helmet provides the rider with a detailed heads-up display through the Epson Moverio. It consists of a rear-view camera, which also shows what is behind them on the display. Lastly, their speed and navigation information is also shown on the display.

The helmet has video recording capabilities as well. The device records everything passively, but the footage is locked into hard memory if an accident is detected. So basically, the helmet has its own Black Box feature built into it. The developers are currently working on the program, which may eventually even inform a rider about a dangerous situation before it materialises.

This self-learning humanoid could pose threat to the BPO industry

Millions of college graduates looking for jobs in the BPO industry, as well as the hundreds and thousands of engineering graduates looking forward to being employed by the IT industry, are in for a shock. Amelia, a humanoid program designed by New York-based IPSoft, could well be a viable alternative to humans in jobs like office accounting and finance to tech support voice calls.

IPSoft's software platform, designed by Chetan Dube, a former New York University mathematics professor, could give the Indian US\$ 70-billion and the entire global US\$ 400-billion export-oriented IT services cum BPO industry a serious run for the money. How, you ask? Amelia with a software algorithm that efficiently mimics the human brain can carry out natural language conversations in a fraction of the time that humans take today, much to their dismay.

However, Amelia's importance grows when subjected to more complex questions as the humanoid can answer the same in mere minutes, thanks to its self-learning algorithm.

The world of self-learning Bots has finally arrived with IPSoft's Amelia (Courtesy: www.zdnet.com)

BINAY Multichip LED Lamps

High reliability direct-retrofit LED bulbs for Control and Instrumentation applications

Ba9s bayonet pin cap

E-10 screw cap

Midget Flange cap

Midget Groove cap

5530 and 6844 slide base

Wedge base

Simple retrofits for existing filament bulb holders, in applications such as annunciator window (fascia) backlighting and illuminated pushbutton switches, where the reliability of indication is important or where lamp replacement is difficult or expensive

- Long life (typically 100,000 hours)
- Low power consumption;
- Low heat generation
- High brightness and wide-angle light emission
- Shock-proof and vibration resistant
- High reliability of indication
- One-time Expense

BINAY Opto Electronics Pvt. Ltd.

44, Armenian Street, Kolkata 700 001, India
Telephone : (033) 2210 2039, 2210 3907, 4006 9875
email : info@binayled.com
Fax : 91-33- 2242 1493 <http://www.binayled.com>

POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

BINAY PowerLED Inspection Hand Lamps utilize a light source comprised of multiple high power white LEDs

- Very low power consumption of 10 watts or less
- Long life (over 50,000 burning hours), covered under 3-year warranty
- Unbreakable shock-proof and vibration-resistant construction; cool light output with no heat radiation
- Glare-free light output, focusing only on the work area
