Indian UPS market to grow at 11 per cent CAGR

In its recent India UPS Market Outlook 2018 report, industry research and consultancy firm RNCOS has revealed that, owing to the significant demand for uninterrupted power supply, the Indian UPS market is expected to grow at a healthy rate of 11 per cent from 2014 to 2018.

The UPS market in India has been predominantly dependent on low-range UPS systems (up to 25kVA) constituting over half of the total UPS market. However, with the growing utilisation of UPS systems in larger industries, the trend is more likely to change and contribute to its growth.

The report reveals that new technologies are gaining greater penetration into the UPS market in India, and there's a gradual inclination towards solar-powered UPS systems. The growth is also fuelled by an increase in demand from new markets, primarily in tier II and III cities.

Biometrics market could grow at 44 per cent

Research and Markets in its recent Biometrics Market in India 2014-2018 report has forecast that the Indian biometrics market is likely to grow at a CAGR of 44.22 per cent over the period 2013-2018. The report is based on an in-depth market analysis in the country with inputs from industry experts.

The report reveals that, while fierce

R.S. Sharma joins as new DeitY secretary

Ram Sevak Sharma, a Jharkhand cadre IAS officer, has joined the Department of Electronics and Information Technology (DeitY) as secretary. He succeeds J. Satyanarayana who retired from the post on 30th April. Sharma was earlier director general and mission director of the Unique Identification Authority of India (UIDIA) where he played a vital role in developing Aadhaar card concept along with former UIDIA Chairman Nandan Nilekani.

Vidyashankar is the new IESA president

After retiring as principal secretary, Commerce & Industries Department, Government of Karnataka, M.N. Vidyashankar, IAS has joined India Electronics and Semiconductor Association as its president. He succeeds P.V.G. Menon.

Nisha Gupta appointed Honeywell Automation India director

Honeywell Automation India Ltd (HAIL), the Indian subsidiary of US-based Honeywell Inc., has appointed Nisha Gupta as its new director. Nisha now becomes the first woman director ever in HAIL's history. Honeywell Automation India is a leading integrated automation and software solutions provider in the country.

Samsung India chief Vineet Taneja resigns

Vineet Taneja has reportedly resigned from his post at Samsung India. He was the country head for the mobile and digital imaging arm of the company. He had joined the South Korean electronics giant from Bharti Airtel in 2013.

Amritanshu Khaitan appointed as Eveready Industries India MD

Eveready Industries India has appointed Amritanshu Khaitan as its new managing director. The company, which makes batteries, torches and lighting instruments, reported a net profit of ₹ 136 million for the financial year ended 31st March, up from ₹ 50.8 million reported in the previous year.

competition from inexpensive non-biometric technologies posed a major deterrent to growth, the increasing number of government-initiated biometrics projects was breathing fresh life into its growth prospects. Further, the biometrics market in India has also been witnessing the gradual integration of biometrics in smart cards, another driving force in its growth story.

Solar and LED markets likely to flourish under the new PM

Even as an estimated 300 million plus people still remain unconnected to the grid in India, with the power demand here likely to double by 2020, the country sees fresh hope in Prime Minister Narendra Modi. Modi has made his intentions already clear: he wants every home in the country to have at least one light bulb and have solar energy to

power the same, by 2019. This provides a massive opportunity of sorts for solar and LED companies.

On an average, nearly 27 per cent of the country's power succumbs to theft and distribution losses. Further, massive blackouts reduce its GDP by nearly 1.5 per cent annually, quotes the World Bank. Amid all the loss, the power that reaches the end user is a massive burden on his/her pockets.

Modi has not been very vocal on actually bringing about an LED revolution in India. However, considering the fact that LEDs consume far less power than traditional lighting solutions, and can be further coupled with networking to save even more of it, LED is clearly the way to go! Modi brought about a successful solar program in the state of Gujarat under his tenure as chief minister there. The program has
