Snippets

Internet of Things market growing substantially

According to a new market research report, the value of Internet of Things (IoT) market was worth \$1029.5 billion in 2013, and is expected to reach \$1423.09 billion by 2020, at an estimated CAGR of 4.08% from 2014 to 2020. Some of the critical technology trends that are expected to have a huge impact on IoT evolution are IPV6, sensor proliferation, cloud computing, big data and faster communication standards such as 4G-LTE and beyond.

US, China, Taiwan dumping solar products in India

India has reportedly found solar products sourced from the US, China and Taiwan dumped in the local market. According to a Bloomberg News report, such dumping has caused "material injury" to domestic manufacturers like Indosolar, Websol Energy System and Jupiter Solar Power. According to India's Ministry of Commerce & Industry, over 20 companies have sold in the country at a price which is less than half of the regular price in their home markets.

Micromax now manufacturing smartphones in India

Micromax has started manufacturing smartphone handsets as well as tablets at its Rudrapur facility in Uttarakhand, though the production is at its initial stage. According to some reports, Micromax is the second largest player in India for both smartphones and tablets with 13 and 16 per cent market share, respectively.

Samsung, Qualcomm invest in Indian chip venture

India's wearable devices chip start-up, Ineda Systems, has received a major investment of ₹ 1020 million from Samsung and Qualcomm. The company is developing a wearable processor with an always-on battery that can last a whole month. The aim is to supply chips for the multitude of devices that are coming with the new age of wearable computing and the Internet of Things.

Su-Kam to invest in solar rooftop systems

Power back-up solutions provider, Su-Kam Power Systems is all set to make an investment of ₹ 600 million for installing solar rooftop systems on as many as 27,000 houses in Tamil Nadu. It has already invested around ₹ 300 million in setting up solar systems across 11,400 houses as of now.

Firm plans solar roads to power entire America

Solar Roadways in the USA wants to turn American roads into giant energy farms. It is seeking a million dollar in funds on crowd-funding website Indiegogo to pave the highways with thick LED-lit glass solar panels, whose modular system can withstand the heaviest of trucks. These panels can be installed on roads, parking lots, driveways, sidewalks, bike paths, playgrounds and literally any surface under the Sun. A nationwide system could produce more clean energy than the country uses as a whole.

or massive virtual screens, China makers are able to provide these features with prices under 300 US dollars. Though wearable gadgets have just started to capture the world's attention, they are essentially using technology that's tried, tested and not costly to produce.

Cloud-based home-management market set for rapid growth

Cloud-based home-management systems that allow users to remotely control household features like lighting and air-conditioning are set for rapid growth in the coming years, with the installed base set to rise by a factor of eight from 2013 to 2018.

The global installed base of cloud-based home-management services is projected to grow to 44.6 million at the end of 2018, up from 5.6 million at the end of 2013, according to IHS Technology. The installed base this year will surge 63 per cent to 9.1 million.

Smart-home specialists are expected to play a major role in the deployment of smart home services globally. This category of companies includes both home automation providers that are moving toward a cloud-based model, alongside a new breed of connected home specialists, such as Nest, Revolv and SmartThings.

BSNL comes up with its own e-mail service

BSNL has joined hands with Jaipur-based Data Infosys to develop BSNL Xgen personal and enterprise email service. The e-mail will reportedly be free for the broadband users all across the country. Others will have to pay for it.

With this service, users can schedule the SMS and e-mails in advance, which will be delivered at the desired time. The messages scheduled to be delivered at a later moment will be stored on the servers. The service will allow the storage of files up to one GB to be attached/sent. Users will be able to transmit as many as 5000 e-mails on a daily basis.

BSNL Xgen email service comes with the OTP (one-time password) feature, which helps in additional protection of the account and also allows the user not to remember the password every time he logs in.
