

Inspired by EFY Article!

We got some good response from the 'Automate Your Home, With Just a Switch' article published in April issue under Innovation section. The most interesting response was from an IIMB graduate (one of the youngest) who has started a company for smart home solutions. He said, our product was the one he was looking for, and he completely agrees with the information in the article. He has started working with us as a distributor.

MATLAB projects

I am a great fan of EFY. I used to make small projects for B.E. and M.Tech students, and now I am myself in M.Tech final year. I am grateful to EFY. Please send me a list of MATLAB-based projects.

Pavan Kumar
Bengaluru

EFY: You may refer to the following projects published in recent issues:

1. Resistor Value Calculation Standalone Application With MATLAB (April 2014)

ERRATA

In my 'Signs of Coming of Next-Gen FPGAs' article published in May issue, the second last line: "Qualcomm, which has developed such a processor together with IBM, plans to release it commercially sometime this year" is wrong. It should be read as "Qualcomm, which has also developed such a processor, plans to release it commercially sometime this year."

—Janani Gopalakrishnan Vikram,
The author

□ In 'Resistor Value Calculation Standalone Application with MATLAB' article published in April issue, the path for the images (bound2.jpg and gray.jpg) needs to be changed as per their location in your computer.

'Spot An Error' Award Winners

In eStyle First Look section in May issue, under 'Asus Launches Fonepad7 Dual-Sim Tablet', the specifications mentioned are of Asus Fonepad 7 single-sim tablet (ME372CG) instead of Asus Fonepad 7 dual-sim tablet (ME175CG). The correct specifications are Android 4.3, 1.2GHz dual-core processor and battery capacity of 3910mAh.

Siddharth Kaul

□ In eStyle First Look section in May issue, under 'HTC One M8 Launched in India,' it is wrongly mentioned that the phone runs on a 2.3GHz Snapdragon 801 processor. Instead, it runs on 2.5GHz Snapdragon 801 processor.

2. Colour-Sensing Robot With MATLAB (February 2014)

3. Digital Communication Design Using MATLAB (December 2013)

4. Edge Detection During Image Processing Using MATLAB (November 2013)

5. 555 Timer Design Using MATLAB (July 2013)

6. Graphics Object Counter Simulation Using MATLAB (January 2013)

EFY DVD

I am an avid reader of your magazine. TinyCad is a program for drawing electrical circuit diagrams, supports standard and custom symbol libraries. It supports PCB layout programs with several netlist formats and can also produce SPICE simulation netlists. It is also often used to draw one-line diagrams, block diagrams and presentation drawings. If you find it useful please include it in EFY DVD.

EFY: Thanks for your suggestion! Such feedback is very helpful. However, we

From electronicsforu.com: Circuits

The 'Voice Recorder and Playback System' construction project published in October 2013 issue is a good project. Which PCB design software was used for this circuit?

Rohit

EFY: We use gEDA software for designing PCB layouts and circuits.

□ Is this a one-time voice recorder chip? Can we erase the voice or overwrite with new one?

Ajinkya

EFY: It is not a one-time voice recorder. You can overwrite the previous recorded message.

□ How to play the recorded message continuously in loop?

Mohan

EFY: If you connect switch S2 (Play) permanently to ground, the recorded message will play repeatedly.

have already featured TinyCad in the DVD accompanying January issue of EFY Plus. Your further feedback would be awaited eagerly nevertheless.

Creating e-Books

The process described in 'Create e-Books from Wiki Pages' DIY article in December 2013 issue is unsuitable for those having slow Internet connection. I tried this and the e-Book created in pdf format was around 7MB. I could not download the file due to my slow Internet connection and also because the Wikipedia server is always very busy. So suggest some better ideas.

Amit Ghosh
Kolkata

The author Hari Om Prakash replies:

As far as slow Internet connection is concerned, like Internet provided by GPRS (10kbps) technology on 2G network, Wikipedia provides another option. As mentioned in the article, you can create Wikipedia user account and save the e-Book with the account so that, in future, when you are connected with a high-speed Internet connection, you can download your e-Books.
