

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM and LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED Intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

Therefore, to test the device, Google scientists have developed artificial skin that factors in a range of skin types and colours. Fake arms that the scientists have created have the autofluorescence and biochemical components of real arms.

Singapore's first 3D-printed concept car is here

A team of students has developed Singapore's first urban solar-electric car with an innovative 3D-printed body shell that has 150 parts. The car is mounted on a carbon-fibre single-shell chassis, and is referred to as Nanyang Technological University (NTU) Venture (NV) 8.

NTU's new eco cars—NV 8 (left) and NV 9 (right)—with the student team who built these (Image courtesy: Nanyang Technological University)

NTU students have also built NTU Venture (NV) 9, a slick three-wheeled race car that can take sharp turns with little loss in speed due to its unique tilting ability inspired by motorcycle racing.

Designed from scratch by NTU undergraduates and built over a year, these two eco-cars aim to attain the highest fuel efficiency. Associate professor Ng Heong Wah, who mentored the two teams, said students had taken a leap of faith and decided to go with disruptive innovations instead of making improvements over previous versions.

The two NTU teams consist of 16 students from various engineering schools. Over a year, they built the cars at the Innovation Lab, housed at School of Mechanical and Aerospace engineering.

Hands-free smartphone for differently-abled people

A completely hands-free smartphone, the first of its kind, has been developed by an Israeli company, Sesame Enable. It will allow differently-abled people to control the device with their head movements. The smartphone is exclusively designed for those who are suffering from spinal cord injuries, amyotrophic lateral sclerosis (ALS), cerebral palsy and other disabilities, that prevent hands and arms to function properly.
