TOOLS & EQUIPMENT

Professional graphics card

Advanced Micro Devices has launched the AMD FirePro W9100 professional

graphics card designed for the next-generation 4K workstations accelerated by open computing language (openCL). With cutting-

edge graphics, up to 2.62 TFLOPS double precision of GPU compute power and ultra-high resolution (4K) multi-display capabilities, video, design and engineering professionals can work at a whole new level of detail, speed, responsiveness and creativity. Its other features include 5.24 TFLOPS of peak single-precision GPU compute performance, 16GB GDDR5 memory and multi-GPU support.

Low-cost development board

Robohaata, a venture of Times Globacom, has come up with a simple

low-cost development board for experimenting with Atmel's popular ATmega8A microcontroller. It can

be powered by on external 5V power supply, or via a USB port using a mini USB cable. The ATmega8 development kit is based on a 28-pin development board which is compatible with many of the Atmel AVR microcontrollers. The controller comes with an in-built bootloader that makes it easily programmable, eliminating the need for

any prerequisite drivers for the board. Applications such as I²C protocol, SPI protocol, analogue-to-digital conversion and PWM generations can be done using Atmega8 development board. It is a smart way to get started with AVR Atmega development.

Industrial I/O board

Phytec launches a rugged industrial I/O board for high-end industrial control applications.

Called phyBOARD - RANA, it is a single-board computer (SBC) based on phyCORE AM335x system on module (SOM) and is powered by Texas Instruments AM335x family based, SITARA ARM Cortex-A8 CPU. This low-cost board delivers a high-reliability industrial feature set designed to automate even the most demanding applications. The core of the RANA Board is the phyCORE-AM335x SOM. The SOM is soldered directly to the base board. This 220-pin SOM interconnect allows interface such as USB OTG, Ethernet, CAN and display.

CCTV camera with LED board plate

Avake Systems introduced a new series of CCTV cameras equipped with a high-radiance intensity 14 mil infrared LED board plate. The plate offers great imaging with low energy consumption and brightens the CCTV camera's view in dark conditions. It has a built-in

auto protection circuit against high voltage. The LED board plate comes with 36 LEDs in the angle 60/90, making it an ideal replacement for broken or worn-out IR LED boards.

LEDs & LED LIGHTING

Slim panel downlights

GSR Infocom has launched round/square slim-panel downlights and their range includes 3W, 6W and 12W. These downlights save up to 50-70 per cent energy, have a high efficiency heat protection system and are driven by a constant current power supply with input AC of 90V to 265V. Other features include an instant start, no flickering, no humming, environmental protection and no RF interference. The company claims that their products have the highest lumens amongst other similar products available in the market.

TEST & MEASUREMENT

Handheld infrared thermometer

Kusam-Meco has released its new IRL-866 handheld infrared thermometer. It features max/min/avg/dif functions,

adjustable high/low alarm setting, fast response time <250 milliseconds, over-range indication, auto power off function and diode laser output (class II). It delivers high accuracy with measure-
