

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM AND LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED intensity degradation over its operating lifetime

nology and can also be used for recycling thermal energy. Photovoltaic cells absorb less light when compared with traditional solar cells. However, the new technology could lead to absorption of both visible as well as infrared light waves. This in turn would lead to greater energy generation by photovoltaic cells.

A robot that can do several useful tasks

Engineered Arts Limited has come up with a new robot that features a dynamic face reflecting varied moods and even responding accurately to expressions of individuals. SociBot-Mini is based on a fully integrated LED pico projection technology featuring custom-developed optics and is a one-of-its-kind robot that could be employed to perform a number of useful tasks.

SociBot-Mini can find and track faces and also accurately tell an individual's gender and estimate his/her age. These are achieved through an image processing software called SHORE developed by Fraunhofer IIS and integrated into the robot.

SociBot robot (Courtesy: www.robotspian.co.uk)

The robot makes eye contact without having to be prompted and attends to users' needs analysing their body language. The SociBot features an HD RGB camera, a fully articulated neck and an IR depth sensor. It sports high-quality audio and a public-facing touchscreen interface.

Multipurpose airship for Internet, surveillance, broadcasting and more

Looks like Google's Project Loon and Facebook's internet.org endeavour have some serious competition coming. Moreover, looking at statistics and features, the new contender seems to be a more viable option, a better alternative to what Google and Facebook can only dream of, at least for now!

The Thales Alenia Space has proposed a new innovative project that could offer Internet, surveillance, security,
