

Indian Security Market Shifting to IP Based Surveillance

The Indian market for security equipment and services has unveiled a steady growth over the last couple of years, according to research and industry experts. Government demand, initiatives, regulations and the ongoing boom in the real-estate sector are the top factors fuelling this market in India. Additionally, rising awareness about the security breaches across the nation is catalysing the adoption of security equipment and services

ABHISHEK A. MUTHA

Indian security and surveillance market is witnessing a slow but healthy growth as compared to China, which leads the market in Asia-Pacific region. It can be divided into four categories: access control, detectors and scanners, closed circuit television (CCTV) and alarm systems. CCTV leads the segment with more than 50 per cent of the entire electronic security and surveillance market in India.

"With the acceptance and high success of CCTV surveillance equipment devices in the US and European markets, and thanks to security concerns and growing awareness, India in the Asia-Pacific region is implementing CCTV surveillance, thereby reflecting an expected growth rate of more than 20 per cent annually," informs Yajan Dua, research analyst, Aerospace and Defence, MarketsandMarkets. He adds, "Indian market was largely unorganised and reportedly flooded with inferior security products. But as the security market holds immense potential, Indian security and surveillance market has drifted toward the right mix of price, technology and market awareness, driving investments in the electronic security industry in India."

On a similar note, Ankur Gupta, head marketing and communication, Ken Research Pvt Ltd, too agrees, "Video surveillance equipment account for a greater part of the share in the revenue of the overall industry, with the government sector, banks,

Video analytic intelligently detects suspicious movement using CCTV surveillance

commercial offices and others being amongst the leading end users of CCTV cameras. Usage of access control systems in India is also gradually growing and has now become a customary deployment in most of the large organisations."

Healthcare, real-estate, BFSI driving demand

Rise in the instances of terrorism and local crime has prompted organisations, authorities and individuals to devise effective response mechanisms. This has led to an increased demand for solutions like video surveillance, metal detectors and swipe cards in sectors like public transport, hospital-

Demand for IP-based or digital network video surveillance technology has emerged as fast-growing technology, attracting small and medium scale integrators and resellers into this sector

ity, airports, BFSI (banking, financial services and insurance) companies and educational institutions, which in turn prompts organisations to incorporate
