

Nixie is the first wearable camera drone in the world that can take off and capture a perfect picture or video. While you are travelling on the most beautiful road in this world with some breathtaking scenery around you, your drone is clicking and shooting for you. Nixie can be folded and attached to a wristlet to carry it easily wherever you go.

The project manager of Nixie, Jelena Jovanovic, said that this camera is aimed to capture any 'you' moment without any photographer and videographer around you. It is able to understand your position, adjust itself in a way to capture an image and return automatically to you (its owner) after its job is done.

A 3D-printed outfit to monitor fitness levels

When fashion and technology gets blended, they both lead to some innovative wearables in this world, and Anouk Wipprecht's new creation echoes just the same. Wipprecht has integrated Intel's Edison chip to one of her creations and designed a wearable technology—a 3D printed outfit. The lady has combined the chip with sensors of different varieties to create the 3D printed Synapse dress and the material used in it is quite flexible—thermoplastic polyurethane (TPU).

The project is in collaboration with designers, Niccolo Casas and Materialise, and it has embedded LEDs throughout the body of the outfit. The outfit uses electroencephalo-

3D-printed Synapse dress

graphy (EEG) and electrocardiography (EKG) to monitor brain activities and heart rate. There is also a camera embedded in the wearable to take a picture, whenever the wearer feels tensed or relaxed. Synapse has a proximity sensor too to measure other people's proximity.

Unlock using your lips

Fingerprint scanner in mobile phones gained immense popularity ever since Apple implemented it in iPhone 5S. Some smartphone manufacturers are coming up with products with fingerprint scanners inbuilt in them. The invention of the fingerprint scanner for authentication has created a big impact in security technology. Recently, software has been created that uses lip movements for authentication. Ahmad

BINAY Multichip LED Lamps

High reliability direct-retrofit LED bulbs for Control and Instrumentation applications

Ba9s bayonet pin cap

E-10 screw cap

Midget Flange cap

Midget Groove cap

5530 and 6844 slide base

Wedge base

Simple retrofits for existing filament bulb holders, in applications such as annunciator window (fascia) backlighting and illuminated pushbutton switches, where the reliability of indication is important or where lamp replacement is difficult or expensive

- Long life (typically 100,000 hours)
- Low power consumption;
- Low heat generation
- High brightness and wide-angle light emission
- Shock-proof and vibration resistant
- High reliability of indication
- One-time Expense

POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

BINAY PowerLED-based Industrial WELL GLASS Luminaires

BINAY's PowerLED Well Glass luminaires replace Conventional HPSV and HPMV well glass fittings

- 65%-70% LOWER power consumption over HPSV or HPMV
- Life of 10 to 15 years - requires no replacement once fitted
- FIVE-YEAR warranty
- Instant turn-on to full brightness
- Full-spectrum white light provides greater clarity and visual acuity; improves visibility and safety
- Optimized thermal management design for long life of LEDs
- Constant light output over 100V-260V operation
- Eco-friendly; eliminates hazardous disposal costs
