

ELECTRONICS ROCKS 2014

A CONFERENCE THAT TRULY ROCKED!

For those of you who missed this year's show, we bring to you a post-show report on all that happened at Electronics Rocks 2014—the design engineers' conference and expo that witnessed 4000+ registrations

ABHISHEK A. MUTHA

With 70 talks, 12 workshops and a whopping turnout, this electronics extravaganza was a grand success, thanks to all the speakers, sponsors, community partners, delegates and every single attendee. Here are select pictures from the third edition of eRocks, highlighting various keynote addresses, star speakers, workshops, expo exhibitors, innovation demos and a lot more.

The audience

Comprising a footfall of 2500+ people (rest 1500 could not attend) passionate about electronics engineering, the audience that attended the talks and workshops at eRocks conference was a mix of design engineers, industry experts, academicians, engineering students and entrepreneurs.

Sessions

The sessions were spread across various verticals like the Internet of Things (IoT), rapid prototyping, aerospace and defence, automotive and medical, open design and Great Indian Jugaad (where speakers demonstrated their latest products and talked about how they were able to successfully get their products to the market). Some key sessions were:

1. A Look at Current Opportunities for ESDM Industry to Leverage by M. N. Vidyashankar, president, IESA
2. The Future of the Connected Car: Wireless of Wheels by Dr Jim Lansford, fellow in Global Standards Group, CSR
3. 3D Printing will Change How the World Leans by Vishal Jariwala, chairman, J Group Robotics
4. Air Surveillance Systems: Challenges Ahead by SLV Santhosh David, deputy manager, HAL
5. Open Source for Automation and Robotics in Industrial Sector by Rajarajan Elango, CTO, Bluetronics
6. The Electrical Switch for Next-generation Smart Homes by Syam Mandanapalli, iRam Technologies
7. Vedic Mathematics in Microcontrollers by P. Chow Reddy, managing director, Interleaved Technologies

Great Indian Jugaad

At every edition of Electronics Rocks, entrepreneurs and start-ups are given a chance to showcase their products, and this year, too, the conference saw some fascinating products. There were about 11 start-ups that were given booths free of charge to display their latest innovations. Some of the products displayed included:

1. An imaging drone that can be used for unmanned surveillance
2. An indigenous alternative to Google Glass
3. Remote labs—a laboratory controlled over the Internet
4. An electric bike completely designed and built in India
5. Gesture-controlled bionic arm
6. IoT switch—an electrical switch for next-generation smart homes
7. Indian 3D scanners and printers heralding a new revolution
