

Need to Turbo Charge Your System?

Introducing the Industry's Leading USB Power Delivery Solution

Introducing the industry's leading USB Power Delivery Solution—the UPD100X family of products from Microchip. This flexible and fully programmable solution is based on the USB-IF Standard Specification, which means it allows the same ubiquitous interoperability as USB brings everyone today. In addition, this solution increases the usable power from a single USB port by 40 times (up to 100W of total available power). This not only allows faster charging of mobile products, but also reduces cable clutter and costs by combining data and power cables. The UPD100X product family combines flexibility and performance, allowing scalability, easy design-in and a powerful end user experience. Packages include: 28-pin TSSOP and 32-pin QFN (5 × 5 mm).
