

This Month's DVD Contents

This month's DVD brings to you design and compilation software from EDAUtils and ABACOM, along with a Tizen SDK to help develop Tizen web and native applications. Also enjoy the Arcade shooting through MissionX

SNEHA AMBASTHA

DesignPlayer by EDAUtils

This is a unified platform that encapsulates the IP-XACT solutions, IP assembly tool and a bunch of utilities around VHDL and Verilog. On one hand, where IP-XACT helps in creation and maintenance, the IP assembly tool supports component definitions in IP-XACT.

LochMaster

LochMaster version 4.0 is a developer's tool, meant for designing, documenting and testing project boards. It has functions like auto-generation of component lists, a connection test, an editable library with a large number of symbols and components, and a lot more.

sPlan 7.0

sPlan is the least complicated schematic editor available for developing circuit schematics. Its functions like the extensive component library, the usage of free definable background form sheets and automatic component numbering make it a great choice for even entry-level circuit designers.

Piklab

Piklab is an integrated development environment (IDE) for PIC microcontroller (MCU). Specifically built for applications devised on Microchip PIC and digital signal processor IC (dsPIC) MCU, Piklab has limited technical support for some of these MCUs as it is still under development. It can work with a variety of compilers, assemblers and programmers with an open source community support available for all.

8051 cross compiler

The 8051 cross assembler takes an assembly language source file that has been created with a text editor and

Popular resources

7zip. Compress and decompress your files using the 9.20 version of 7zip.

JRE. Upgrade to the latest update for JRE version 7 for Windows 64-bit and MAC operating system in order to improve the security of your system.

Portable VLC. The portable version of VLC sports the exact same functionality as the standalone edition. It also supports HTTP, RTP, MMS and RTSP stream playback.

Opera. Install the latest version of the Opera web browser, version 24.0.1558.53_S on your Ubuntu system to search, navigate and browse with style.

Portable Free Download Manager. As the name suggests, it is a portable app that cuts down the time required to complete a download.

Thunderbird. 31.1.0 version of Thunderbird is the latest version of a free email application that allows an easy set up and customisation with great features.

Mozilla Firefox. Mozilla Firefox version 32.0.3 is the latest version of a light and tidy open source web browser with simple and effective UI, fast speed and strong security capabilities.

Apache Open Office. The latest version of Apache Open Office version 4.1.1 allows word processing, spreadsheets, presentations, graphics, databases and more.

ClamWin. ClamWin is a free antivirus program for Microsoft Windows 8/7/Vista/XP/Me/2000/98 and Windows Server 2012, 2008 and 2003. It has a high detection rate for viruses and comes with a scanning scheduler.

translates it into a machine language object file. This translation process is done in two passes over the source file, during which the cross assembler first builds a symbol table from the symbols and labels used in the source file and then actually translates the source file into the machine language object file.

Sprint-Layout

This is a simple yet powerful tool that creates layouts for both single-sided and double-sided PCBs. Along with the functions necessary for board design, it has a few professional features like export of Gerber files (for manufacturing) or HPGL (for isolation-milling with CNC machines).

FreeScada

This is an open source SCADA system for MS Windows (2000/XP/Vista) that provides flexible tools for visualisation and interactive control of any industrial process.

Linkindoy

Linkindoy is a framework for industrial software development, system administrators and everyone who is interested in graphs and statistics about almost any kind of data.

RealView

RealView is a measurement application that is used to record and plot the measured values from analogue hardware devices in real time. It can plot measurements into a single diagram and can arrange several diagrams on one or more pages.

Profilab

Profilab is used to develop your own digital control or the analogue measuring technology for any project. It has a graphical user interface that works in the same manner as creating a wire diagram.

AudioWave

AudioWave produces noise signals from 1Hz to 20kHz in the form of sine and modulated signals. It helps the sound-card operate like an LF-signal-generator.

Tizen SDK

This is a comprehensive set of tools for developing Tizen web and native applications. It consists of IDE, emulator, tool chain, sample code and documentation. Tizen applications may be developed without relying on an official Tizen IDE, as long as the application complies with Tizen packaging rules. ●
