APLAB gets SIATI Award for Excellence

The Society of Indian Aerospace Technologies and Industries (SIATI) conducted a survey and decided to present an award for the Excellence in Indigenous Development to APLAB. For this, all avionics related organisations like BEL, HAL and DRDO Labs recommended names of the deserving Indian industries and zeroed in on APLAB. The company was considered for the Award for their power systems development, which met the stringent military specifications, leading to independence from imports and thus saving of foreign exchange.

Maxim now supplying Xilinx UltraScale FPGAs

Maxim Integrated Products, Inc. is now the lead supplier for Xilinx UltraScale FPGAs. Maxim supplies the power management for three Xilinx FPGA reference designs, the Kintex UltraScale FPGA KCU105 Evaluation Kit being one of these. Maxim's products are up to 30% smaller compared to previous generations on the market.

FCI and Samtec have new strategic partnership

FCI Electronics and Samtec, the two leading suppliers of high-speed connectors and interconnect systems, announced the signing of a second-source agreement under which Samtec is licensed to manufacture, market and sell FCI's next-generation ExaMAX high-speed connector product portfolio.

Tektronix enabling engineering education

Tektronix has introduced special prices for its new education-specific TBS1000B-EDU series of oscilloscopes. This initiative will be making oscilloscopes super affordable for engineering colleges and universities in India, so one can own 70MHz oscilloscopes for just 29,000 rupees.

The policy has some key points which include 15 per cent capital subsidy, 5 per cent interest subsidy for 7 years, 100% exemption on stamp duty, 100% tax reimbursement on VAT or CST for 10 years and so on. A special incentive package will also be considered under this policy for those units which invest over 2000 million rupees in this sector.

This policy will help the state government to promote a number of industries for producing mobile devices, telecom products, consumer electronics, power electronics, IT systems and hardware along with the components like transistors, resistors, switches and more.

Haryana solar power policy gets government nod

Haryana Solar Power Policy 2014 has been approved by the Haryana government and will be valid till March 31, 2017. The policy targets achieving megawatt (MW) scale grid-connected solar power projects, roof-top grid interactive SPV systems, small-scale grid solar power projects, training programmes

on solar projects in ITIs and also introducing diploma courses on the same. The policy also aims to develop model villages for solar energy promotion and further R&D in the field of solar energy in engineering colleges.

The solar power generation capacity is required to be increased to 1300MW from present 8MW. Incentives will be provided by the state government to set up solar power projects.

Under the policy, the state will also develop SPV solar power plants to fulfil Solar Renewable Purchase Obligation. All efforts will aim to fulfil the entire requirement of solar power which is required to be purchased by the Power Distribution Licensee (DISCOM). By March 2017, HAREDA shall promote and also install 100MW grid-connected solar power project in two phases.

Bharat Electronics forms JV with French MNC Thales

Bharat Electronics Limited (BEL), a state-owned Indian company, and Thales, a French group, have entered

into a deal to form a joint venture (JV) in India. The JV named BEL-Thales Systems Limited will design, develop and manufacture radar systems for defence and civilian applications.

BEL is an electronics company which has nine factories in India. It is a public sector undertaking of the Indian government under the Ministry of Defence which primarily manufactures advanced electronic products for the Indian armed forces. Thales Group is a French MNC which is into designing and building electrical systems and providing services for the aerospace, defence, transportation and security markets.

This is the fourth time that Thales is forming a JV in India. Thales' existing JVs are with Samtel and Rolta. The JV with Samtel produces helmet-mounted sight and display systems. The JV with Rolta is into developing C4ISR systems.

Sony might restart manufacturing in India

Japan's largest consumer electronics exporter, Sony Corp, could restart their manufacturing in India. India is the fourth largest market, following China, the US and Japan, for Sony. But the company has no manufacturing unit in the country as of now.

Sony India's managing director Kenichi Hibi said that the recent initiatives of the Union government could bring about a turnaround in the Indian economy. He said, "Sony is looking at India for long-term growth. While no decision has been made yet, the potential products for manufacturing in India could be both flat-panel televisions and smartphones."

Most of the Sony products available in India are sourced from Thailand, Malaysia, China and Japan. For past two decades the company has been ruling Indian market and it also had a manufacturing facility which was shut down in 2004. This fiscal year the company is targeting 120,000 million rupees sales in India. Recently, some manufacturing investment has been made by Japanese firm Panasonic in India, which is likely to be followed by Daikin, Sharp and Hitachi soon.
