

Live Video

Can you suggest a solution to relay a live event from one place to another along with sound? I am looking for hardware that would enable me to send the video and audio signals in real time either through the Internet or through cable up to a distance of three kilometres.

EFY: Please see 'Live Telecasting on Your Web' article published in May issue.

Projects for Students

As final (4th) year student of ECE, I have to do a project in this semester but I have no idea what to do and how? Can you please help me with any topic which would be best for an ECE student? Please also mention how I can do that.

Manish Kumar
Durgapur

EFY: We carry construction details of several DIY articles in each issue of EFY magazine. You may consult your friends and professors to select the most suitable project for you. If you need any help in hands-on training, please check efytechcenter.com

Charger Circuit

I want to make a battery charger circuit for a specific application.

There are two batteries of 12V, 3.2AH and the supply available is 35V-

40V DC, 0.25A approximately. I need a battery charger circuit which can use this supply to charge the batteries. When one battery is charging the other could be put to use. But after the first battery has been fully charged the circuit should start charging the second battery automatically.

Shubham Chaware
Nagpur

EFY: Please see 'Solar-Powered Home Lighting System' project published in April issue, which is designed to charge two 12V batteries one after the other.

EFY+ DVD

I am trying to install NI Circuit Design Suite from EFY+ DVD, but during installation it is asking for serial number! Where can I find the serial number?

Mohamed Rilwanullah
Through e-mail

EFY: Please follow strictly the steps given under 'Installation' section in the article in EFY Plus magazine.

If you do that, there would be no need of entering serial number and you can extend the validity of the software to 45 days.

Xbee Controlled Aircraft

The code of Xbee Controlled Aircraft circuit published in September issue is not opening in Arduino IDE. I checked the other circuit codes and they are opening perfectly. I am using FEL (Fedora Electronics Lab) OS.

'Spot An Error' Award Winners

In Xbee-Controlled Aircraft project published in September issue, diode D1(1N4007) is used in the circuit but it is not mentioned in the parts list.

Shanmukhappa Javali

□ In Lithium-Ion Battery Charger circuit published in September issue, in component layout of the PCB, IC1 is not printed anywhere. It should be printed between C4 and letters 1 and 24.

Praveena S. Javali

□ In eStyle Buyers' Guide on page 12 in August issue, HP Omni 10 operating system is mentioned as Windows 8 instead of Windows 8.1.

Yogesh Shukla

□ In DIY: Software section on page 111 in August issue, the code for turning on and off LED is wrongly shown in Arduino IDE (Fig. 9). The 12th line should be read as:

```
digitalWrite(ledPin, HIGH); //  
sets the LED on
```

Also the comments of 10th and 12th lines have got interchanged.

Anjaly Anto M.

The author Somnath Bera replies:

It's not a compilation problem. It could be a corrupted ino file which is not opening in the Arduino IDE.

The ino or the Arduino codes are all plain text files comprising 'C' codes. So you should try to open the code in plain gedit, or vi, or in nano editor to see whether it opens there or not.
