

Broad Range of Solutions for Power Conversion Designers

The power conversion market is constantly evolving, with a focus on increased efficiencies and higher integration.

The devices you used in your last power conversion design may already be old news. No matter which topology or approach you choose, Microchip can support your design with our comprehensive portfolio of Intelligent Power products, which covers the spectrum from discrete analog solutions to sophisticated and flexible power conversion using our digital signal controllers (DSCs).

The dsPIC® "GS" family of DSCs is optimized to provide full digital control of power conversion stages. Compensation loops implemented in software offer the ultimate in flexibility, enabling designs leveraging numerous topologies to be tailored for energy efficiency over widely varying load or environmental conditions. Complete reference designs for AC/DC and DC/DC power conversion are available to enable faster time-to-market and simplify designs.
