POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

your body naturally reacts to turn right, and that's how LeChal works."

Smart shoes are generally aimed at demographic markets like dementia patients and children whose parents want to track their movements. But this smart shoe will target mass-market consumers, and its main focus is on creating stylish footwear along with hi-tech functions. Already 25,000 orders have been received for the shoes in advance which cost \$100 to \$150. The shoes are being manufactured in China.

There are certain limitations in these shoes which can become drawbacks however, such as battery failure, loss of Bluetooth connectivity and so on. But these problems can be resolved through live feed of a user's position to a friend or a relative. The best part of these shoes is, as per Lawrence, you will no longer lose your phone. If you go away too far from your phone, the shoes buzz as a warning.

Here comes the smallest audio mixer in the world

Music is a must for every party, be it a large one or small. If your budget is low then you can't hire a DJ, obviously. Keeping this budget thing in mind, two New York based folks have built an affordable audio mixer called Openmix.

Openmix, claimed to be the smallest audio mixer in the world, is a cross fader which allows smooth transition from one song to another. Its wide compatibility is its key factor, and as it connects two devices through a headphone jack, Openmix can be used with PCs, smartphones, tablets and MP3 players, too.

Smallest audio mixer (Courtesy: www.kickstarter.com)

Openmix does not run on batteries. Just one audio source needs to be plugged in the right male headphone jack and the other one in the left. Then connect your speakers with the female headphone jack on the other end. Now you can move from one device to another by turning the knob. You also have the option to become a DJ by plugging in another iOS or Android device with a third-party DJ app, and you can add sound effects to your music.

Openmix retails for \$39. The makers of the product have promised to deliver it by January 2015, but the success of such a product is quite uncertain in this competitive market of smartphones and tablets and all their apps.

A jolt sensor can easily detect concussion now

Concussion, a traumatic brain injury, is quite common for people who are into sports like boxing, wrestling, football, soccer and basketball. Concussion is caused by a bump or jolt to the head. Due to concussion, the brain moves quickly back and forth after receiving a serious blow to the head.
