

What's In This Month's DVD?

This month's DVD brings to you a variety of software, starting with Sigasi design tools to the open source Chipmunk simulation and schematic tools. Also check the debugging tools like Thunderbench and H-Jtag along with a Spice circuit optimiser

SNEHA AMBASTHA

Sigasi

Sigasi is a design creation tool that replaces your VHDL editor and helps you deal with the complexity of VHDL design. Based on Eclipse platform, Sigasi offers instant syntax error reporting and instant code style checks.

EDWinXP

EDWinXP is a fully-integrated EDA software package for automated design of electronic products. It integrates Schematic Editor, EDSpice Simulator and Mixed Mode Simulator for simulation, PCB Layout Editor to create PCB layouts and Fabrication Manager to generate manufacturing output files for Photoplotter, NC Drill, etc.

Chipmunk

Chipmunk is a collection of software tools for Unix systems and OS/2 (a series of computer operating systems, initially created by Microsoft and IBM) that performs a wide variety of tasks, such as electronic circuit simulation and schematic capture, graphics editing and curve plotting, to name a few.

ThunderBench

ThunderBench is a comprehensive integration of a debugger, a C/C++ compiler and an IDE within the Eclipse platform for ARM Cortex devices. The Eclipse standardisation in ThunderBench removes the pain of changing IDEs.

H-Jtag

H-Jtag is a debug agent that includes three tools: H-Jtag Server, H-Flasher and H-Converter. H-Jtag Flasher is a Flash programmer whereas H-Jtag

Popular resources

7Zip. Compress and decompress your files using the 9.20 version of 7zip.

JRE. Upgrade to the latest update for JRE version 7 for Windows 32-bit system in order to improve the security of your system. The older versions do not include the latest security updates.

VLC Media Player. Update your VLC Media Player to version 2.1.5 for DVDs, VDVs, streaming protocols and various audio and video formats (MPEG-1, MPEG-2, MPEG-4, DivX, MP3, Ogg, 3GP, etc).

Opera. Install the latest version of Opera web browser version 24.0.1558.53_S on your Windows computer to search, navigate and browse with style.

Free Download Manager. Download files and whole websites from any remote server via HTTP, HTTPS and FTP on your Windows computer using the Free Download Manager 3.9.4 Build 1472 / 5.0 Build 3126 Alpha.

Thunderbird. 31.1.0 version of Thunderbird is the latest version of a free email application that allows an easy set-up and customisation with great features.

Mozilla Firefox. Mozilla Firefox version 32.0 is the latest version of a light and tidy open source web browser with simple and effective UI, fast speed and strong security capabilities.

Apache Open Office. The latest version of Apache OpenOffice (version 4.1.1) is here to allow word processing, spreadsheets, presentations, graphics, databases and more.

Comodo Internet Security. Comodo Internet Security is a free, multi-layered security offering 360° protection.

Server is a debug agent. The H-Converter is a converter tool that supports different file formats like HEX, BIN and ELF.

ASCO

A Spice Circuit Optimizer (ASCO) simplifies the design process by automatically verifying, fine-tuning and optimising the circuit functionality. It helps in redesigning a circuit already described in the Spice net-list and allows an easy migration of the designs to an advanced semiconductor technology.

ExpressPCB setup

ExpressPCB setup program includes ExpressSCH for drawing schematics and ExpressPCB for circuit board layout. Designing of 2- or 4-layer boards can be done just by inserting the component footprints and then dragging them into positions.

IndigoSCADA

IndigoSCADA is a tool for small custom projects. It supports multiple HMI windows and multiple users with dif-

ferent access rights. It has a real-time event and alarm notification.

TANGO

TANGO is a device-oriented control system for Linux and Windows operating systems. In order to implement the distributed control objects, TANGO provides a framework in C++, Python and Java.

CodeLite

CodeLite is an open source, cross-platform IDE for the C/C++ programming languages. Built and tested on Windows 7, Ubuntu 12.04/12.10/13.04/13.10, Vista and XP, it has a built-in support for GCC/clang/VC++ that acts as a generic support for compilers.

PWCT

Programming Without Coding Technology (PWCT) is not a wizard for creating any application in 123 steps; it is a general-purpose Visual programming tool designed for novice and expert programmers. ●
