EFY Note

The source codes of this project are included in this month's EFY DVD and are also available for free download at source.efymag.com

At any time, if you face any problem in the circuit, refer Table II for troubleshooting.

Further applications

Some other applications of this system could be:

1. Apart from the weather data one can get different types of weather analysis by sending relevant URL request to the server by referring to the full document available on the website.

2. It can be made into a portable system by interfacing it to a 10.2cm (4-inch) TFT colour LCD display and making it wireless using MR24WBOMA instead of ENC28J60

3. This design may be better than a backyard weather station because you receive accurate professional weather forecasts.

4. One can modify the design to connect with other data providers to display important data such as news headlines and stock market information. ●
