Rocks 2014

October 10-11, NIMHANS, Bengaluru

A Design Engineers'
Conference & Expo

October 10-11, NIMHANS, Bengaluru

Conference Tracks | Workshops | Speakers | Specials | Passes

This year, we will have 50 awesome sessions on the Internet of Things, Rapid Prototyping, Open Hardware Design, Great Indian *Jugaad*, as well as on embedded systems for automotive, defence and medical sectors. We also have 9 awesome workshops lined up for you this year!

1 > Conference Tracks**The Internet of Things**

Learn from industry leaders as they discuss IoT case studies, and share their experiences in designing IoT solutions. Explore exciting sessions on nanotechnology and cryptography in IoT, as well as how to ensure your IoT product is compliant with industry standards.

**Rapid prototyping**

Take your design from paper to the real world, with rapid prototyping. Get started with additive and subtractive rapid prototyping, while exploring special solutions made for Indian scenarios. There are even sessions demonstrating how to use e-swap to quickly build a prototype with stuff lying around! To top it all, we have set up a workshop where you can get started with 3D printing, and even get a 3D print of your own head (in plastic, of course)!

**Aerospace and defence**

What's so challenging about air surveillance systems? Senior R&D engineers from HAL, BEL and DRDO as well as from private design houses will discuss futuristic radars, UAVs and drones, as well as how to get started with designing for the defence sector.
